

# VELS

INSTITUTE OF SCIENCE, TECHNOLOGY & ADVANCED STUDIES (VISTAS)

(Deemed to be University Estd. u/s 3 of the UGC Act, 1956)

PALLAVARAM - CHENNAI

**NAAC ACCREDITED WITH 'A' GRADE**

*Marching Beyond 25 Years Successfully*

## **B.Tech Petroleum Engineering**

### **Curriculum and Syllabus**

(Based on AICTE with  
Choice Based Credit  
System)

Effective from the Academic Year

**2018-2019**

**Department of Petroleum Engineering  
School of Ocean Engineering**

## **PROGRAM EDUCATIONAL OBJECTIVES (PEO)**

PEO1: Build their career as a successful and distinguished Petroleum Engineer

PEO2: Pursue higher education and research in Oil and gas sector, other engineering streams and specializations

PEO3: Acquire innovative and creative thinking skills to augment their professional growth

PEO4: Nurture in design, analysis and implementation skills to innovation technology in the Hydrocarbon sector with global context.

PEO5: Develop the awareness among the students about the various social responsibilities related to engineering ethics and human values with ecological importance.

## **PROGRAM OUTCOME**

PO-1: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO-2: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO-3: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO-4: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO-5: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

PO-6: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO-7: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO-8: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO-9: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO-10: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO-11: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO-12: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

## **PROGRAM SPECIFIC OUTCOME**

PSO-1: To learn various hydrocarbon exploration methods, hydrocarbon source and cap rock characterization techniques, field surveying and mapping the surface and sub-surface features to help finalize a pilot plan for exploration drilling.

PSO-2: To learn various types of drilling rigs including power systems, fluid circulation systems, well control systems, well monitoring systems, rotary systems, hoisting, drill string assemblies, cementation, directional drilling, and their economics for finalizing a drilling plan.

PSO-3: To learn various reservoir-well completions, methods of lifting hydrocarbon and other wellbore fluids to the surface by reservoir energy and/or artificial means, maintain efficient well production, stimulate reservoir, and design surface facilities required for oil and gas separation and preliminary processing and transportation.

PSO-4: To characterize and model conventional and unconventional hydrocarbon reservoirs to estimate both the reserves and the production potential under natural and improved recovery methods for optimum development of a field.

PSO5: Be able to build the nation, by imparting technological concepts and tools on emerging fields through the Managerial and entrepreneurs skills

## BOARD OF STUDIES

The details of the suggested Board of Studies (BOS) Members for the Department of Petroleum Engineering are shown below.

S.No	Name of the Board Member	Designation	Institute / Industry
<b>INTERNAL MEMBERS</b>			
1	Mr. R.Soundara Pandian	Head of the Department, Petroleum Engineering	VISTAS
2	Dr. S. Pichaiah	Assistant Professor, Department of Petroleum Engineering	VISTAS
3	Mrs. Subhashini Sankar	Assistant Professor, Department of Petroleum Engineering	VISTAS
<b>EXTERNAL EXPERT MEMBERS</b>			
1	Mr.R.Ramakrishnan	General Manager(Retired), Head-BMG, Oil and Natural Gas Corporation Limited (ONGC), KG-PG Basin, Chennai	ONGC, Chennai
2	Dr.T.Nagalakshmi	Associate Professor, Department of Petroleum Engineering, AMET	AMET University, Chennai

**VELS INSTITUTE OF SCIENCE, TECHNOLOGY AND ADVANCED STUDIES**  
**(VISTAS) B.Tech. PETROLEUM ENGINEERING DEGREE COURSE**  
**COURSES OF STUDY AND SCHEME OF ASSESSMENT**

**SYLLABUS  
CORE COURSES**

**Course Objective:**

The student will acquire basic proficiency in English including reading and listening comprehension, writing and speaking skills.

**Course Outcome (Skill Development):**

- To acquire the ability to speak effectively in real life situations.
- To write letters and reports effectively in formal and business situations.
- To develop listening skills for academic and professional purposes.
- To gain effective speaking and listening skills in communication.
- To develop the soft skills and interpersonal skills to excel in their career.
- To enhance the performance of students at Placement Interviews, Group Discussions and other recruitment procedures.

**Unit I Vocabulary Building****6**

**General Vocabulary** – Nouns - Compound nouns, Word borrowing & Word making, Foreign machinery in English, Dictionary and Thesaurus usages, Synonyms, Antonyms, Prefixes and Suffixes, Homonyms, Homographs and Homophones, Changing words from one form to another, Acronyms and Abbreviations.

**Unit II Basic Writing****6**

**Sentence structures** – Kinds of sentences, Types of sentences, Clauses and Phrases, Punctuations, Word Links and Connectives, Summarizing, Precise writing, Paragraph Writing.

**Unit III Identifying Common Errors in English****6**

Articles, Prepositions, Subject-verb Agreement, Pronouns - Relative pronouns, Demonstrative pronouns, Misplaced Modifiers, Redundancies, Clichés, Infinitives Or Gerund

**Unit IV Nature and Style of Sensible Writing****6**

Describing people, place and situations, Process description, Definitions, Numerical Expressions, Information Transfer- Flow chart Bar chart and Pie chart, Checklists, Writing introduction and conclusion.

**Unit V Writing Practices****6**

**Letter Writing- Formal & Informal Letters**, Report Writing- Letter Report, Accident Report, Investigation Report and Survey, Essay writing, Comprehension Passages.

**Total hours: 30****Text Books:**

1. English for Scientists, Prof.K.R.Lakshminarayanan, Former Head, Department of

Humanities and Social sciences, Sri Venkateshwara College of Engineering, Pennalur, Sriperumbudur, Tamilnadu SCITECH PUBLICATIONS (INDIA PVT.LTD)2014

2. Department of English, Anna University, Mindscapes, 'English for Technologists and Engineers', Orient Longman Pvt. Ltd, Chennai: 2012.
3. Department of Humanities and Social Sciences, Anna University, 'English for Engineers and Technologists' Combined Edition (Volumes 1 and 2), Chennai: Orient Longman Pvt. Ltd., 2006.
4. Department of English, Anna University, Mindscapes, 'English for Technologists and Engineers', Orient Longman Pvt. Ltd, Chennai: 2012.
5. Department of Humanities and Social Sciences, Anna University, "English for Engineers and Technologists" Combined Edition (Volumes 1 and 2), Chennai: Orient Longman Pvt. Ltd., 2006.
6. M.AshrafRizvi, "Effective Technical Communication", Tata McGraw-Hill Publishing Company Limited, New Delhi.2009

**Suggested Readings:**

1. Practical English Usage. Michael Swan. OUP. 1995.
2. Remedial English Grammar. F.T. Wood. Macmillan.2007
3. On Writing Well. William Zinsser. Harper Resource Book. 2001
4. Study Writing. Liz Hamp-Lyons and Ben Heasley. Cambridge University Press. 2006.
5. Communication Skills. Sanjay Kumar and PushpLata. Oxford University Press. 2011.
6. Exercises in Spoken English. Parts. I-III. CIEFL, Hyderabad. Oxford University Press

**Course Outcome (Employability):**

CO-1: Understand the basic concepts of a **simple harmonic oscillator**.

CO-2: Identify the remedies for acoustic of building

CO-3: Illustrate the different types of aberration in lens.

CO-4: Distinguish between **Fresnel and Fraunhofer diffraction**

CO-5: Classify the **different types of lasers** and their applications.

**UNIT I: Simple harmonic motion, damped and forced simple harmonic oscillator 9**

Harmonic oscillator – Differential equation and solution of simple harmonic oscillator – **simple pendulum** – damped harmonic oscillator: Equation of motion and its solution, qualitative description of heavy, critical and light damping – energy decay in a damped harmonic oscillator – Q factor – forced mechanical and electrical oscillators – **power absorbed by oscillator**.

**UNIT II: Non-dispersive transverse and longitudinal waves in one dimension and introduction to dispersion 9**

Waves, travelling waves example of waves, characteristics of a waves - longitudinal and transverse waves– Examples - Transverse wave on a string, the wave equation on a string- longitudinal waves and the wave equation- **acoustics waves and speed of sound**- characteristics of musical sound, quality of tone, decibel- noise pollution- acoustics- of buildings - Reverberation - Reverberation time.

**UNIT III: The propagation of light and geometric optics 9**

Fermat's principle of stationary time- laws of reflection and refraction- Fresnel equations, **reflectance and transmittance**, Brewster's angle, total internal reflection - Dispersion, Dispersive power of prism- Defect of lenses- spherical aberration- coma-achromatic lenses.

**UNIT IV: Wave optics 9**

Huygens' Principle, superposition of waves - **Young's double slit experiment**- Newton's rings-Michelson interferometer, Mach Zehnder interferometer - Fraunhofer diffraction from a single slit and a circular aperture, the Rayleigh criterion for limit of resolution and its application to vision - Dispersion of a diffraction of grating and their resolving power.

**UNIT V: Lasers 9**

Einstein's theory of matter radiation interaction and A and B coefficients- population inversion, different types of lasers: gas lasers (He-Ne, CO<sub>2</sub>), solid-state lasers (ruby, Neodymium), dye lasers; **Properties of laser beams**: mono-chromaticity, coherence, directionality and brightness, laser speckles, applications of lasers in science, engineering and medicine

**Total hours: 45**

**Reference Books**

1. Ian G. Main, Oscillations and waves in physics
2. H.J. Pain, The physics of vibrations and waves
3. E. Hecht, Optics
4. A. Ghatak, Optics
5. O. Svelto, Principles of Lasers

**Course Objectives:**

The objective of this course is to familiarize the prospective engineers with techniques in calculus and linear algebra. It aims to equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling more advanced level of mathematics and applications that they would find useful in their disciplines.

**Course Outcome (Skill Development):**

- CO1:** To introduce the idea of applying differential and integral calculus to notions of curvature and to improper integrals. Apart from some applications it gives a basic introduction on Beta and Gamma functions.
- CO2:** To introduce the fallouts of Rolle's Theorem that is fundamental to application of analysis to Engineering problems.
- CO3:** To develop the tool of power series for learning advanced Engineering Mathematics.
- CO4:** To familiarize the student with functions of several variables that is essential in most branches of engineering.
- CO5:** To develop the essential tool of matrices in engineering.

**Unit I: Calculus****12**

Evolutes and involutes- Evaluation of definite and improper integrals- Beta and Gamma functions and their properties

**Unit II: Calculus****12**

Rolle's Theorem, Mean value theorems, Taylor's and Maclaurin theorems with remainders-indeterminate forms and L'Hospital's rule.

**Unit III: Sequences and Series****12**

Convergence of sequence and series, tests for convergence- Power series, Taylor's series, series for exponential, trigonometric and logarithm functions.

**Unit IV: Multivariable Calculus (Differentiation)****12**

Limit, continuity and partial derivatives, directional derivatives, total derivative- Tangent plane and normal line- Maxima, minima and saddle points- Method of Lagrange multipliers.

**Unit V: Matrices****12**

Introduction to matrix and rank of a matrix-System of linear equations- Symmetric, skew-symmetric and orthogonal matrices- Eigenvalues and eigenvectors- Diagonalization of matrices-Cayley-Hamilton Theorem and Orthogonal transformation.

**Text Books:**

1. G.B. Thomas and R.L. Finney, Calculus and Analytic geometry, 9<sup>th</sup> Edition, Pearson, Reprint, 2002.
2. Ramana B.V., Higher Engineering Mathematics, Tata McGraw Hill New Delhi, 11, Reprint, 2010

**Reference Books:**

1. Erwin kreyszig, Advanced Engineering Mathematics, 9<sup>th</sup> Edition, John Wiley & Sons, 2006.
2. Veerarajan T., Engineering Mathematics for first year, Tata McGraw-Hill, New Delhi, 2008..
3. D. Poole, Linear Algebra: A Modern Introduction, 2nd Edition, Brooks/Cole, 2005.
4. N.P. Bali and Manish Goyal, A text book of Engineering Mathematics, Laxmi Publications, Reprint, 2008.
5. B.S. Grewal, Higher Engineering Mathematics, Khanna Publishers, 36<sup>th</sup> Edition, 2010.

**Course Objective:**

1. To obtain basic knowledge on electrical quantities such as current, voltage, power and energy.
2. To provide adequate working knowledge on basic DC and AC circuits used in electrical and electronic devices.
3. To understand the working principle, construction, applications of DC machines, AC machines & measuring instruments.
4. To emphasize the importance of transformers in transmission and distribution of electric power.

**Course Outcome (Employability):**

At the end of this course the students will be able to,

- CO-1:** Predict the behavior of any electrical and magnetic circuits. Formulate and solve complex AC, Dc circuits.
- CO-2:** Identify the type of electrical machine used for that particular application.
- CO-3:** Realize the requirement of transformers in transmission and distribution of electric power and other applications.
- CO-4:** Understand the construction ,principle of operation, speed control of three phase induction motor
- CO-5:** Demonstrate wiring, earthing and to do power factor calculations.

**Unit I: DC Circuits**

12

Electrical circuit elements (R, L and C), voltage and current sources, Kirchoff current and voltage laws, Mesh and Nodal analysis, Analysis of simple circuits with dc excitation, Wye↔Delta Transformation, Superposition, Thevenin and Norton Theorems. Time-domain analysis of first-order RL and RC circuits.

**Unit II: AC Circuits**

12

Representation of sinusoidal waveforms, peak and rms values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance. Three phase balanced circuits, voltage and current relations in star and delta connections.

**Unit III: Transformers**

12

Magnetic materials, BH characteristics, ideal and practical transformer, equivalent circuit, losses in transformers, regulation and efficiency. Auto-transformer and three-phase transformer connections.

**Unit IV: Electrical Machines & Power Converters**

12

Generation of rotating magnetic fields, Construction and working of a three-phase induction motor, Significance of torque-slip characteristic. Single phase induction motor.

Construction, working, torque-speed characteristic and speed control of separately excited dc motor. DC-DC buck and boost converters, duty ratio control. Single phase Bridge Rectifier, Single Phase voltage source inverters.

**Unit V: Electrical Installations**

**12**

Components of LT Switchgear: Switch Fuse Unit (SFU), MCB, ELCB, MCCB, Types of Wires and Cables, Earthing. Types of Batteries, Important Characteristics for Batteries. Elementary calculations for energy consumption, power factor improvement and battery backup.

**Total**

**hours: 60**

**Text / References Books:**

1. D. P. Kothari and I. J. Nagrath, "Basic Electrical Engineering", Tata McGraw Hill, 2010.
2. D. C. Kulshreshtha, "Basic Electrical Engineering", McGraw Hill, 2009.
3. L. S. Bobrow, "Fundamentals of Electrical Engineering", Oxford University Press, 2011.
4. E. Hughes, "Electrical and Electronics Technology", Pearson, 2010.
5. V. D. Toro, "Electrical Engineering Fundamentals", Prentice Hall India, 1989.

**Course Objectives:**

- To develop in students, graphic skills for communication of concepts, ideas and design of engineering products.
- To expose them to existing national standards related to technical drawings.

**Course Outcome (Employability) :**

**CO-1:** Develop special curves and sketch by free hand orthographic views

**CO-2:** Understand and draw the projections of points, straight lines and planes

**CO-3:** Sketch the projections of simple solids like prisms, pyramids, cylinder and cone

**CO-4:** Develop lateral surfaces of the uncut and cut solids

**CO-5:** Develop the perspective projection of simple solids, truncated prisms, pyramids, cone and cylinders and sketch the isometric projection.

**Concepts and Conventions (Not for Examination)****12**

Importance of graphics in engineering applications – Use of drafting instruments – BIS conventions and specifications – Size, layout and folding of drawing sheets – Lettering and dimensioning.

**Unit I: Introduction to Engineering Drawing and Plane Curves****12**

Curves used in engineering practices: Conics – Construction of ellipse, Parabola and hyperbola by eccentricity method – Construction of cycloid, Epicycloid, Hypocycloid – construction of involutes of square and circle – Drawing of tangents and normal to the above curves. Scales – Plain, Diagonal and Vernier Scales.

**Unit II: Projection of Points, Lines and Plane Surfaces****12**

Projection of points and straight lines located in the first quadrant – Determination of true lengths and true inclinations – Projection of polygonal surface and circular lamina inclined to both reference planes - Auxiliary Planes

**Unit III: Projection of Solids****12**

Projection of simple solids like prisms, pyramids, cylinder and cone when the axis is inclined to one reference plane by change of position method - Auxiliary Views

**Unit IV: Section of Solids and Development of Surfaces****12**

Sectioning of above solids in simple vertical position by cutting planes inclined to one reference plane and perpendicular to the other – Obtaining true shape of section - Auxiliary Views. Development of lateral surfaces of simple and truncated solids – Prisms, pyramids, cylinders and cones – Development of lateral surfaces of solids with cylindrical cutouts, perpendicular to the axis.

**Unit V: Orthographic Projection and Isometric Projection**

**12**

Free hand sketching: Representation of Three Dimensional objects – General principles of orthographic projection – Need for importance of multiple views and their placement - layout views – Developing visualization skills through free hand sketching of multiple views from pictorial views of objects. **Principles of isometric projection** – isometric scale – isometric projections of simple solids, truncated prisms, pyramids, cylinders and cones.

**Total Hours: 60**

**Text Books:**

1. N.D. Bhatt, "Engineering Drawing" Charotar Publishing House, 46 th Edition, (2003).

**References:**

1. K.V. Natrajan, "A text book of Engineering Graphics", Dhanalakshmi Publishers, Chennai (2006).
2. M.S. Kumar, "Engineering Graphics", D.D. Publications, (2007).
3. K. Venugopal & V. Prabhu Raja, "Engineering Graphics", New Age International (P) Limited (2008).
4. M.B. Shah and B.C. Rana, "Engineering Drawing", Pearson Education (2005).
5. K. R. Gopalakrishnana, "Engineering Drawing" (Vol.I&II), Subhas Publications (1998).
6. Dhananjay A.Jolhe, "Engineering Drawing with an introduction to AutoCAD" Tata McGraw Hill Publishing Company Limited (2008).
7. Basant Agarwal and Agarwal C.M., "Engineering Drawing", Tata McGraw Hill Publishing Company Limited, New Delhi, (2008).

**Course Outcome (Skill Development):**

**CO-1:** Examine the dispersive power of the prism using a spectrometer.

**CO-2:** Estimate the formation of Newton's rings in the air-film in between a plano-convex lens.

**CO-3:** Calculate the wavelength and particle size of semiconductor diode lasers.

**CO-4:** Measure the velocity of ultrasonic waves and compressibility of the liquid using ultrasonic interferometer.

**CO-5:** Calculate the gravity  $g$  at that place and the radius of gyration

**List of Experiments**

1. Spectrometer – Dispersive Power of prism
2. Spectrometer – Grating
3. Semiconductor Laser – To find Wavelength and particle size.
4. Ultrasonic Interferometer
5. Torsional Pendulum
6. Hooke's Law
7. Compound pendulum- To determine 'g'
8. Newtons' Ring
9. Air wedge
10. Bifilar Pendulum

**Course Objective:**

1. To provide comprehensive ideas about AC and D C circuit analysis, working principles and applications of basic machines in electrical engineering.

**Course Outcome (Skill Development) :**

At the end of this course the students will be able to,

**CO1:** Study different meters and instruments for measurement of electrical quantities

**CO2:** Measure power and power factor in ac circuits

**CO3:** Understand 3 phase balanced and unbalanced, star and delta connected supply with load

**CO4:** Measure power in 3 phase circuits

**CO5:** Understand the Characteristics of DC motor and Induction motor

**List of Laboratory Experiments/Demonstrations:**

1. Basic safety precautions. Introduction and use of measuring instruments – voltmeter, ammeter, multi-meter, oscilloscope. Real-life resistors, capacitors and inductors.
2. Sinusoidal steady state response of R-L, and R-C circuits – impedance calculation and verification.
3. Resonance in R-L-C circuits.
4. Loading of a transformer: measurement of primary and secondary voltages and currents, and power
5. Three-phase transformers: Star and Delta connections. Voltage and Current relationships (line -
6. Load Characteristics of a DC Motor
7. Torque - Slip Characteristic of an Induction motor
8. Three phase induction motors - Direction reversal by change of phase-sequence of connections.
9. Demonstration of dc-dc converter.
10. Demonstration of dc-ac converter.
11. Demonstration of ac-dc converter.

**Total hours: 30**

**Course Objectives:**

- To gain effective speaking and listening skills in communication.
- To develop the soft skills and interpersonal skills to excel in their job.
- To enhance the performance of students at Placement Interviews, Group Discussions and other recruitment exercises

**Course Outcome (Skill Development):**

CO-1: Use appropriate communication strategies for enhancing interpersonal relationship

CO-2: Apply soft skills in personal, social and corporate life

CO-3: Articulate knowledge of chosen profession and corporate skills effectively in interviews with appropriate body language

CO-4: Demonstrate active group discussion and presentation skills such as initiating a conversation, exchanging ideas, expressing dissent or agreement and giving persuasive presentation.

CO-5: Prepare job applications, various letters, abstract and summary for technical articles.

**List of Exercises:**

- Listening comprehensions
- Pronunciation, Phonology
- Intonation
- Stress and Rhythm
- Situational Dialogues
- Communication in workplace
- Interviews, Seminar
- Formal Presentations
- Group Discussions
- Debates
- JAM sessions

**Total hours: 30**

**Text Books:**

1. English for Scientists, Prof.K.R.Lakshminarayanan, Former Head, Department of Humanities and Social sciences, Sri Venkateshwara College of Engineering, Pennalur, Sriperumbudur, Tamilnadu SCITECH PUBLICATIONS (INDIA PVT.LTD)2014
2. Department of English, Anna University, Mindscapes, 'English for Technologists and Engineers', Orient Longman Pvt. Ltd, Chennai: 2012.
3. Department of Humanities and Social Sciences, Anna University, 'English for Engineers and Technologists' Combined Edition (Volumes 1 and 2), Chennai: Orient Longman Pvt. Ltd., 2006.

4. Department of English, Anna University, Mindscapes, 'English for Technologists and Engineers', Orient Longman Pvt. Ltd, Chennai: 2012.
5. Department of Humanities and Social Sciences, Anna University, 'English for Engineers and Technologists' Combined Edition (Volumes 1 and 2), Chennai: Orient Longman Pvt. Ltd., 2006.
6. M.AshrafRizvi, "Effective Technical Communication", Tata McGraw-Hill Publishing Company Limited, New Delhi.2009

**Suggested Readings:**

1. Practical English Usage. Michael Swan. OUP. 1995.
2. Remedial English Grammar. F.T. Wood. Macmillan.2007
3. On Writing Well. William Zinsser. Harper Resource Book. 2001
4. Study Writing. Liz Hamp-Lyons and Ben Heasley. Cambridge University Press. 2006.
5. Communication Skills. Sanjay Kumar and PushpLata. Oxford University Press. 2011.
6. Exercises in Spoken English. Parts. I-III. CIEFL, Hyderabad. Oxford University Press

**Course Objective**

The course will enable the student to

- Analyse microscopic chemistry in terms of atomic and molecular orbitals and intermolecular forces.
- Rationalise bulk properties and processes using thermodynamic considerations.
- Distinguish the ranges of the electromagnetic spectrum used for exciting different molecular energy levels in various spectroscopic techniques.
- Rationalise periodic properties such as ionization potential, electronegativity, oxidation states and electronegativity.
- List major chemical reactions that are used in the synthesis of molecules.

**Course Outcome (Employability):**

**CO-1:** To explain the relation between the intermolecular forces present within a substance and the temperatures associated with changes in its physical state.

**CO-2:** To apply formalisms based on molecular symmetry to predict spectroscopic properties.

**CO-3:** To determine and understand the operation of electrochemical systems for the production of electric energy, i.e. batteries and fuel cells.

**CO-4:** To explain general corrosion in terms of electrochemistry

**CO-5:** To explain the arrangement of elements in the periodic table and relate the arrangement to electronic configuration, bonding and properties.

**Unit I : Atomic and molecular structure, Intermolecular forces and potential energy surfaces****14**

Molecular orbitals of diatomic molecules and plots of the multicentre orbitals. Equations for atomic and molecular orbitals. Energy level diagrams of diatomics. Pi-molecular orbitals of butadiene and benzene and aromaticity. Crystal field theory and the energy level diagrams for transition metal ions and their magnetic properties. Ionic, dipolar and van Der Waals interactions. Equations of state of real gases and critical phenomena. Potential energy surfaces of H<sub>3</sub>, H<sub>2</sub>F and HCN.

**UNIT II: Spectroscopic techniques and application****12**

Principles of spectroscopy and selection rules. Electronic spectroscopy. Vibrational and rotational spectroscopy of diatomic molecules. Applications. Diffraction and scattering

**UNIT III: Use of free energy in chemical equilibria****12**

Thermodynamic functions: energy, entropy and free energy. Estimations of entropy and free energies. Free energy and emf. Cell potentials, the Nernst equation and applications. Acid base, oxidation reduction and solubility equilibria. Water chemistry. Corrosion.

**UNIT IV: Periodic properties****12**

Variations of s, p, d and f orbital energies of atoms in the periodic table, electronic

configurations, atomic and ionic sizes, ionization energies, electron affinity and electronegativity, polarizability, oxidation states, coordination numbers and geometries, hard soft acids and bases, molecular geometries

**UNIT V: Organic reactions and synthesis of a drug molecule** **10**

Introduction to reactions involving substitution, addition, elimination, oxidation, reduction, cyclization and ring openings. Synthesis of a commonly used drug molecule.

**Total hours: 60**

**Text Books**

1. Chemistry: Principles and Applications, by M. J. Sienko and R. A. Plane.
2. Fundamentals of Molecular Spectroscopy, by C. N. Banwell.
3. Engineering Chemistry (NPTEL Web-book), by B. L. Tembe, Kamaluddin and M. S. Krishnan.

**Reference Books**

1. Physical Chemistry, by P. W. Atkins. Organic Chemistry: Structure and Function by K. P. C. Vollhardt and N. E. Schore, 5<sup>th</sup> Edition  
<http://bcs.whfreeman.com/vollhardtschore5e/default.asp>.
2. University chemistry, by B. H. Mahan.

**Course Outcome:**

The objective of this course is to familiarize the students with statistical techniques. It aims to equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling various problems in the discipline.

**Course Outcome (Skill Development):**

**CO-1:** The students will have a fundamental knowledge of the concepts of probability.

**CO-2:** Knowledge of standard distributions which can describe real life phenomenon.

**CO-3:** The notion of sampling distributions and statistical techniques used in engineering

**CO-4:** Use appropriate statistical methods in the analysis of simple datasets

**CO-5:** Develop skills in presenting quantitative data using appropriate diagrams, tabulations and summaries

**Unit I: Basic Probability**

12

Probability spaces, conditional probability, independence; Discrete random variables, Independent random variables, the multinomial distribution, Poisson approximation to the binomial distribution, infinite sequences of Bernoulli trials, sums of independent random variables; Expectation of Discrete Random Variables, Moments, Variance of a sum, Correlation coefficient, Chebyshev's Inequality.

**Unit II: Continuous Probability Distributions**

12

Continuous random variables and their properties, distribution functions and densities, normal, exponential and gamma densities.

**Unit III: Bivariate Distributions**

12

Bivariate distributions and their properties, distribution of sums and quotients, conditional densities, Bayes' rule.

**Unit IV: Basic Statistics**

12

Measures of Central tendency: Moments, skewness and Kurtosis - Probability distributions: Binomial, Poisson and Normal - evaluation of statistical parameters for these three distributions, Correlation and regression – Rank correlation.

**Unit V: Applied Statistics**

12

Curve fitting by the method of least squares- fitting of straight lines, second degree parabolas and more general curves. Test of significance: Large sample test for single proportion, difference of proportions, single mean, difference of means, and difference of standard deviations. Small samples: Test for single mean, difference of means and correlation coefficients, test for ratio of variances - Chi-square test for goodness of fit and independence of attributes.

### **Text/Reference Books**

1. Erwin Kreyszig, Advanced Engineering Mathematics, 9<sup>th</sup> Edition, John Wiley & Sons, 2006.
2. P. G. Hoel, S. C. Port and C. J. Stone, Introduction to Probability Theory, Universal Book Stall, 2003 (Reprint).
3. S. Ross, A First Course in Probability, 6th Ed., Pearson Education India, 2002.
4. W. Feller, An Introduction to Probability Theory and its Applications, Vol. 1, 3rd Ed., Wiley, 1968.
5. N.P. Bali and Manish Goyal, A text book of Engineering Mathematics, Laxmi Publications, Reprint, 2010.
6. B.S. Grewal, Higher Engineering Mathematics, Khanna Publishers, 35th Edition, 2000.
7. Veerarajan T., Engineering Mathematics (for semester III), Tata McGraw-Hill, New Delhi, 2010.

**Course Objective:**

- To understand the basic concepts of programming – Flow chart, Pseudo code.
- To learn the fundamentals of C programming - declarations, operators, expressions and control statements.
- To learn the manipulation of strings, functions, pointers and file operations.
- To understand the concepts of arrays, basic sorting and searching algorithms.
- To find the order of time complexity of basic algorithms

**Course Outcome (Employability) :**

**CO-1** Understand the principles of algorithm, flowchart and pseudo code.

**CO-2** Find the order of time complexity of algorithms.

**CO-3** Understand programs involving control instructions, arrays, structures and unions.

**CO-4** Utilize the string manipulations, and to write functions for various applications using C programming constructs.

**CO-5** Apply the file operations in 'C' programming.

**Unit 1: Introduction to Programming** **9**

Introduction to Programming (Flow chart / pseudo code, compilation etc.), Variables (including data types) -Arithmetic expressions and precedence, Conditional Branching and Loops - Writing and evaluation of conditionals and consequent branching Iteration and loops

**Unit 2: Arrays and Basic Algorithms** **9**

Arrays (1-D, 2-D), Character arrays and Strings, Searching, Basic Sorting Algorithms, Finding roots of equations, Notion of order of time complexity through example programs

**Unit 3: Function and Pointers** **9**

Functions (including using built in libraries), Parameter passing in functions, call by value, Passing arrays to functions: idea of call by reference, Recursion with example programs such as Finding Factorial, Fibonacci series, etc. Pointers - Defining pointers, Use of Pointers in self-referential structures

**Unit 4: Structures and Unions** **9**

Structures - Defining structures and Array of Structures, Structures containing Pointers, Unions - Storage classes: auto, static, extern, register – Dynamic memory allocation

**Unit 5: String Functions and Files** **9**

Strings - library string functions, pointers in strings, pointers and function arguments, Files - file Operations, processing a file, Preprocessor directives, use of type def, Command line arguments, Enumerated data types.

**Total Hours: 45**

**Text Books:**

1. Byron Gottfried, "Schaum's Outline of Programming with C", McGraw-Hill
2. E. Balaguruswamy, "Programming in ANSI C", Tata McGraw-Hill 3.

**Reference Books:**

1. Brian W. Kernighan and Dennis M. Ritchie, "The C Programming Language", Prentice Hall of India
2. Yashavant Kanetkar, "Let Us C", BPB Publications
3. Ashok.N.Kamthane, "Computer Programming", Pearson Education (India)

**Course Objective:**

The aim of this lab is to illustrate the principles of chemistry relevant to the study of science and engineering by doing experiments.

**Course Outcome (Skill Development)**

The students will able:

**CO-1:** To estimate the rate constants of reactions, **freezing point depression** and partial coefficient of immiscible liquids.

**CO-2:** To develop a small drug molecule and **analyse a salt sample**.

**CO-3:** To find the viscosity and partition coefficient of a substance.

**CO-4:** To determine the **saponification value of an oil**.

**CO-5:** To determination of cell constant and conductance of solutions

**List of experiments**

1. Determination of surface tension and viscosity
2. Thin layer **chromatography**
3. Ion exchange column for removal of hardness of water
4. Determination of chloride content of water
5. Colligative properties using freezing point depression
6. Determination of the rate constant of a reaction
7. Determination of cell constant and conductance of solutions
8. **Potentiometry** - determination of redox potentials and emfs
9. Synthesis of a polymer/drug
10. Saponification/acid value of an oil
11. Chemical analysis of a salt
12. Lattice structures and packing of spheres
13. Models of potential energy surfaces
14. Chemical oscillations- Iodine clock reaction
15. Determination of the partition coefficient of a substance between two immiscible liquids
16. **Adsorption of acetic acid by charcoal**
17. Use of the capillary viscosimeters to **demonstrate the isoelectric point** as the pH of minimum viscosity for gelatin sols and/or coagulation of the white part of egg.

**Text Books**

1. S. Sundaram and K. Raghavan "Practical Chemistry", S. Viswanathan. Co. 3<sup>rd</sup> edition **2011**.
2. Gnanaprakasam, Ramamurthy, "Organic Chemistry Lab Manual" S. Viswanathan

Pvt. Ltd. 3<sup>rd</sup> edition 2011

### **Reference Books**

1. Vogel's – "Textbook of qualitative organic Analysis", Longmann, 12<sup>th</sup> edition, **2011**
2. J. N. Gurtu and R. Kapoor "Advanced experimental Chemistry", S. Chand and Co.  
6<sup>th</sup> edition, **2010**

**Course Objective:**

To design and develop C Programs for various applications

**Course Outcome (Skill Development)**

The students will able:

CO1 : Understand the Programming Environment

CO2 : Develop programs using various control instructions and operator precedence in C Programming.

CO3 : Apply the string manipulations, arrays and functions for various applications in C.

CO4 : Analyze the use of structures, unions and pointers in C

CO5 : Utilize the various file operations in C

**List of Experiments:**

1. Familiarization with programming environment
2. Simple computational problems using arithmetic expressions
3. Problems involving if-then-else structures
4. Iterative problems
5. 1D Array manipulation
6. Matrix problems
7. String operations
8. Simple functions
9. Solving Numerical methods problems
10. Recursive functions
11. Pointers and structures
12. File operations

**Course Objective:**

- To study bench fitting drawings for making male and female fittings as per the given dimensions and Tolerances.
- To study Arc welding drawings for making common weld joints as per the given dimensions.
- To study sheet metal development drawings for making common metal parts/components as per the given dimensions.

**Course Outcomes (Skill Development):**

After successful completion of the Engineering Practices Laboratory course, the student will be able to

**CO-1:** Able to make various joints in the given object with the available work material.

**CO-2:** Familiarity with different types of woods used and tools used in woodworking technology.

**CO-3:** Familiarity with different types of tools used in **sheet metal working.**

**CO-4:** Developments of **sheet metal jobs from GI sheets,** knowledge of basic concepts of **soldering.**

**CO-5:** Familiarity with **different types of tools used in fitting.**

**Workshop Practice:****● Machine shop**

To make Facing and plain turning, step turning, **drilling in the lathe**

**● Fitting shop**

To make square, V joint in bench fitting as per the given dimension And Tolerances

**● Carpentry**

To make half lap joint, dovetail, TEE Lap joint

**● Welding shop**

To make single, butt, lap and T fillet joint by arc welding with the **back hand and fore hand welding** techniques as per the given dimensions.

**● Sheet Metal Work**

To make simple Dust pan, Rectangular trays in sheet metal with the jigs as per the given Dimensions.

**Course Objective:**

To understand Fourier series representation of periodic signals. The analysis of signal is far more convenient in the frequency domain.

**Course Outcome (Skill Development):**

CO1: Develop Fourier series for different types of functions.

CO2: Define and determine Fourier Transform.

CO3: Derive and obtain the solution of wave, heat equation

CO4: Problems of Fourier series and Fourier transforms used in engineering applications.

CO5: Students understand the z-transforms and its properties

**UNIT I: FOURIER SERIES****12**

Dirichlet's conditions – General Fourier series – Odd and even functions – Half range sine series – Half range cosine series – Parseval's identity – Harmonic Analysis.

**UNIT II: FOURIER TRANSFORM****12**

Fourier integral theorem (without proof) – Fourier transform pair – Fourier Sine and Cosine transforms – Properties – Transforms of simple functions – Convolution theorem – Parseval's identity.

**UNIT III: PARTIAL DIFFERENTIAL EQUATIONS****12**

Formation of partial differential equations - singular integrals- Solutions of standard types of first order partial differential equations – Lagrange's linear equation - Linear partial differential equations of second and higher order with constant coefficients of homogeneous functions.

**UNIT IV: APPLICATIONS OF PARTIAL DIFFERENTIAL EQUATIONS****12**

Classification PDE-Method of separation of variables – One dimensional wave and heat equation – Steady state solution of two-dimensional heat equation (square plate only) .

**UNIT V: Z -TRANSFORM AND DIFFERENCE EQUATIONS****12**

Z-transform –Introduction- properties – Inverse Z-transform (using partial fraction and residues) – Convolution theorem - Formation of difference equations – Solution of difference equations using Z- transform.

**Total Hours: 60****TEXTBOOKS:**

1. Grewal. B.S, "Higher Engineering Mathematics", Khanna Publications ,Delhi,43<sup>rd</sup> Edition, 2013.

2. Ramana B.V, "Higher Engineering Mathematics", Tata McGraw Hill Publishing Company, New Delhi, 6<sup>th</sup> reprint,2008.

**Course Objective (Employability) :** To impart basic knowledge about the various facts of Petroleum Engineering, Structure of petroleum compounds, Drilling, Formation Evaluation, Well Testing and Well site operations - Also to understand the basic Principles of Petroleum Engineering.

**COURSE OUTCOME (Employability):**

**CO-1:** To be well versed with the fundamental principles of petroleum engineering stream and Industry as well.

**CO-2:** To be aware of the physical and chemical properties of reservoir oil, gas, and formation water.

**CO-3:** To clearly understand the basic concepts in oil and gas drilling.

**CO-4:** To have basic knowledge about different types of wells.

**CO-5:** To be well versed with formation evaluation and well logging.

**Unit I: Introduction**

9

**Chemistry of petroleum** - Structure of petroleum compounds, Types – alkanes, Napthenes, paraffins, aromatics. **Physical and chemical properties** of formation fluids, **petroleum economics**.

**Unit II: Drilling**

9

**Drilling** – History, types of drilling –cable tool, rotary, **drilling rigs and components**. **Drilling fluids, casing and cementation**. Types of wells – exploratory, delineation, development wells. **Vertical, deviated, inclined, horizontal and ERD wells** - Planning – **GTO**.

**Unit III: Logs**

9

**Formation Evaluation** – cutting, cores, **mud logging unit**, well logging, types of well logs and their use. Basic relationships of **well log interpretation**, the spontaneous potential (SP) log, gamma ray and caliper log, resistivity log, porosity and lithology determination.

**Unit IV: Well testing and production**

9

**Well Testing, perforation, testing methods**, well completion production. **Stimulation methods, recovery methods, Material balance, reserves estimation, drilling fluid control**, data acquisition during drilling.

**Unit V: Environmental concerns**

9

Introduction to **environmental control** in the **petroleum industry**, environmental transport of **petroleum wastes, well site operations, roles of drilling, reservoir and production, hazards, environmental concerns, transportation** of oil and gas, **oil pollution and control**.

**Total hours: 45**

**TEXT BOOKS**

1. T.E.W Nind, Principles of oil production - 2nd edition Mc Graw-Hill, 1981.
2. A.T. Bourgoyne, K.K. Millheim, M.E. Chenevert and F.S. Young Jr. Applied, Drilling Engineering (Digital Edition -Rental), SPE Textbook Series Vol. 2, 1991.
3. Carl Gatlin; Petroleum Engineering: Drilling and Well Completions, Prentice Hall, Technology and Engineering, 1960.

#### **REFERENCE BOOKS**

1. A.G. Lucas, Modern Petroleum Technology Upstream, Vol I Hurley Publishing, Edition 2002.
2. A.G. Lucas, Modern Petroleum Technology Downstream, Vol II Hurley Publishing, VI Edition 2002.
3. Introduction to Petroleum Engineering by Geltin.
4. J.CH Garry, Hardward G.E and M.J.Kaiser, Petroleum Refining: Technology and economics, CRC Press ,V Edition,2007

**Course Objectives:** To impart sound knowledge on nature and properties of rocks and minerals, their sedimentation pattern, sedimentary basins and geological methods in search of hydrocarbons and well site geological methods.

**COURSE OUTCOME(Employability):**

**CO-1:** To understand the basic concepts of petroleum geology.

**CO-2:** To clearly understand the geological basin and hydrocarbon reservoir.

**CO-3:** To clearly explain the different rock types and properties.

**CO-4:** To be well versed with the sedimentary basins, stratigraphy and sedimentation process.

**CO-5:** To have a basic knowledge about geomorphology and palaeontology.

**UNIT I: Introduction**

9

Age and origin of earth, interior of earth, plate tectonics, and geologic times scale. Sedimentary geology, Basins and Margins. Properties of subsurface fluids. Petroleum Chemistry.

**UNIT II: Rocks**

9

Types of rocks and their formation, texture, minerals and properties, clay minerals, Sedimentary rocks – classification of rocks, types of sedimentary rocks, properties, sedimentation process, sedimentary environments.

**UNIT III: Geomorphology**

9

Geomorphology – concepts, processes, Stratigraphy – principles, order of superposition, palaeontology and index fossils. Structural geology – principles, folds, faults, joints and unconformities; Geology of India.

**UNIT IV: Origin of Petroleum**

9

Origin and distribution of petroleum – Sedimentary basins – types, origin and classifications, petroleum system – Generation, Migration, Accumulations of hydrocarbons. Description of some Indian petroliferous basin.

**UNIT V: Testing and Analysis**

9

Well site geological methods – sample collection & description, fluorescence, cores & core analysis, correlation and introduction to various geological maps, stratigraphic methods.

**Total hours: 45**

**TEXT BOOKS**

1. Cox, P.A., “The Elements on Earth”, Oxford University Press, Oxford 1995.
2. Wilson, M., “Igneous Petrogenesis”, Unwin Hyman, London 1989.
3. G B Mahapatra, A Text book of Geology, CBS Publication, New Delhi.

**REFERENCE BOOKS**

1. Boggs, S., “Principles of Sedimentology and Stratigraphy”, second edition, Merrill Publishing Co., Toronto, 1995.
2. Krumblein, W.C. and Sloss, L.L., “Stratigraphy and Sedimentation”, second edition W.H. Freeman and Co., 1963

**Course Objectives:** To impart knowledge on the concepts of geophysics and geochemistry for petroleum exploration, geophysical methods – gravity, magnetic, seismic, data acquisition, processing and interpretation, 2D, 3D, 4D seismic and geochemical evaluation methods.

**COURSE OUTCOME: (Employability)**

**CO-1:** To understand the basic concepts in geophysics.

**CO-2:** To be well versed with different geophysical oil and gas exploration methods.

**CO-3:** To be aware of gravity and magnetic methods.

**CO-4:** To clearly understand the principles of surveying, anomalies, and interpretation.

**CO-5:** To acquire the fundamental knowledge about the working process of the Seismic method.

**UNIT I: Introduction to geophysics**

9

Geoscience disciplines, Geo engineering concept, Introduction to geophysics, geophysical methods of exploration, physical properties of rocks-density, susceptibility, resistivity, elasticity, factors controlling the properties.

**UNIT II: Gravity and Magnetic methods**

9

Gravity and Magnetic methods – Gravity method –definition, gravity surveying, measurement methods, anomalies data interpretation. Magnetic methods – concepts, survey and measurements, anomalies, interpretation.

**UNIT III: Seismic methods**

9

Fundamentals of elasticity, Bulk Modulus, Poisson's ratio, elastic seismic wave theory, body and surface waves, P&S waves, seismic instruments, seismic channels, application of seismic data, interpretation of data and maps.

**UNIT IV: Hydrocarbons**

9

Composition and characteristics of liquid and gaseous petroleum hydrocarbons-normal, branched and is alkanes, aromatics, asphalene, resins. Hydrocarbon impurities, oil field waters – definitions and characteristics.

**UNIT V: Survey**

9

Surface and subsurface geochemical surveys, Role of geochemistry in petroleum exploration, organic matter and kerogen – characteristics and types. Maturation, measurement of maturity-thermal alteration index, vitrinite reflectances. Rock Eval, Hydrogen index, gas chromatography.

**Total hours: 45**

**TEXTBOOKS**

1. Mason, B. and Moore, C.B., "Introduction to Geochemistry", Wiley Eastern, 1991.
2. Faure, G., 1986, Principles of isotope Geology, John Wiley, 2002.

## **REFERENCE BOOKS**

1. The Blue Planet : An introduction to Earth System Science 2nd Edition by Brian J.Skinner, 2005.
2. Hoefs, J., "Stable Isotope Geochemistry"., Springer Verlag, 1980.
3. Krauskopf, K.B., "Introduction to geochemistry", McGraw Hill, 1967.

**Course Objectives:** To develop student's ability to understand fundamentals of fluid mechanics, fluid motion, equation of motion, Newton's law of fluid friction, laminar and turbulent flow, various types of pump, friction coefficient, continuity equation etc.

**COURSE OUTCOME (Employability):**

**CO-1:** To acquire the fundamental knowledge and concepts of fluid mechanics.

**CO-2:** To be aware of basic thermodynamic properties.

**CO-3:** To understand the behavior of fluid at rest.

**CO-4:** To understand the impacts of hydrostatic forces on fluid flow in a particular medium.

**CO-5:** To clearly differentiate the concepts of fluid kinematics and dynamics.

**UNIT-I: Introduction to Fluid Mechanics**

9

Concept of fluid- fluid as a continuum – physical properties- density, specific weight, specific volume & specific gravity, problems- thermodynamic properties- isothermal process, adiabatic process, dimension of R, universal gas constant, problems- pressure-viscosity-types of fluid-surface tension-capillarity-vapour pressure & cavitation-problems.

**UNIT-II: Fluid Statics**

9

Fluid pressure-Pascal's law-pressure variation in a fluid at rest – measurement of pressure: manometers-simple & differential manometer-pressure at a point in compressible fluid-temperature at any point in compressible fluid-problems- hydrostatic forces on a submerged surfaces: vertical, horizontal, inclined & curved –problems- buoyancy & flotation.

**UNIT-III: Fluid Kinematics, Fluid Dynamics**

9

Classifications of fluid flow-acceleration in fluid flow-streamlines, path lines & streak lines- examples –equation of continuity & its application - Equation of motion, Bernoulli's equation, Navier stokes equation of motion – problems.

**UNIT-IV: Flow Measurement, Transmission Of Energy**

9

Venturi, Orifice, nozzles, mouth pieces-pitot tube & sharp crested weirs/notches – steady flow through pipes- Darcy Weisbach equation-losses in pipelines-Hydraulic & energy gradient; Uniform in open channels-Chezy's equation - Fanning's equation-Economical rectangular cross section- Trapezoidal cross sections.

**UNIT-V: Compressible Fluids, Dimensional Analysis & Similitude**

9

Isothermal adiabatic flow- continuity & energy equations-steady flow of gases through venturi meter & pipes. Introduction – dimensions of physical quantities- dimensional homogeneity-dimensional groups; Buckingham  $\pi$  theorem –group method- Rayleigh's method of indices- dimensionless numbers- applications of dimensional method-similitude-problems

**Total hours: 45**

**TEXT BOOKS**

1. Neol de Nevers, "Fluid Mechanics for Chemical Engineers." Second Edition, Tata Mc.Graw Hill-1991.
2. James O.Wilkes and Stacy G.Bikes, "Fluid Mechanics for chemical Engineers" Prentice Hall PTR (International Series in Chemical Engineering) – 1999.
3. Mc.CabeW.L.Smith, J.C and Harriot, P "Unit operations in Chemical Engineering", Mc.Graw Hill, V Edition, 2001.

#### **REFERENCE BOOKS**

1. James O.Wilkes and Stacy G.Bikes, "Fluid Mechanics for Chemical Engineers", 3<sup>rd</sup> edition, 2001.
2. White F.M., "Fluid Mechanics", IV Edition, Mc.Graw – Hill Inc. 1999.
3. Darby, R. "Chemical Engineering Fluid Mechanics" Marcel Decker, 1998.

**Course Objectives:** To impart Knowledge on Various instrument systems and their errors, various signal conditioning circuits. To understand the Principle of various active and passive transducers, various storage and display devices, Instruments for measuring the various electrical and electronics quantities.

**COURSE OUTCOME (Employability):**

**CO-1:** To understand the basic concepts of semiconductor.

**CO-2:** To be aware of diode components and filter methods.

**CO-3:** To clearly understand the Zener diode functions.

**CO-4:** To be well versed with the working process of bipolar junction transistors.

**CO-5:** To have the knowledge and awareness about special semiconductor devices.

**UNIT-I Semiconductor Basics**

9

Introduction to semiconductors – Intrinsic and Extrinsic – Doping – P and N type semiconductors – charge carriers – valence and conduction bands. P-N Junction: PN junction diode – barrier potential – forward and reverse bias – diode specifications – diode as a rectifying element – half wave, full wave and bridge rectifier – filter circuits – ripple filtering – capacitor, inductor and combination filters.

**UNIT-II Zener Diode**

9

Breakdown voltage – avalanche and zener breakdowns – operation under forward and reverse bias – zener diode as a voltage regulator. Bipolar Junction Transistor: PNP and NPN types – construction – working principles – transistor as a switch and as amplifier – series and shunt voltage regulators – transistor configurations – CB, CE and CC.

**UNIT-III Special Semiconductor Devices**

9

Light Emitting Diode, Liquid Crystal Display, 7 segment displays – Diode for Alternating Current (DIAC) - Triode for Alternating Currents (TRIAC) – Device characteristics, Input output characteristics- their applications.

**UNIT-IV Digital Electronics**

9

Basic gates and derived logic gates – simplified implementation – conversions between analog signals and digital signals, transfer characteristic of DAC, digital to analog conversion techniques, performance parameters of DAC.

**UNIT-V Transducers**

9

Primary and secondary – active and passive – analog and digital transducers – pressure, temperature, speed, displacement and light sensors – open loop and closed; loop configurations.

**Total hours: 45**

**TEXTBOOKS**

1. Morris, A.S , " Principle of Measurement and Instrumentation ", Prentice Hall of India

,1999.

2. Doebelin E.O., "Measurement Systems - Application and Design ",Tata McGraw Hill Publishing Company-1990

### **REFERENCE BOOKS**

1. Murthy , D.V.S., " Transducer and Instrumentation " , Prentice Hall of India Pvt. Ltd. , 1995.
2. Millman J. and Halkias .C., " Integrated Electronics " , 4 Edition,TataMcGraw Hill Publishing Company-2001

**Course Objectives:** To determine experimentally the Preparation of terrain and Plotting of geological data on terrain map. Also to identify the structure of contour maps. Preparation of porosity and saturation map and reserves can be estimated in the Laboratory.

**COURSE OUTCOME (Skill Development):**

**CO-1:** Students develop the ability to recognize mineral properties and use those to differentiate and identify common rock forming minerals.

**CO-2:** Students acquire the skills to classify igneous rocks using texture and composition as identified in hand samples.

**CO-3:** Working with sedimentary rocks students demonstrate their ability to differentiate clastic versus chemical sedimentary rocks; are able to identify the respective rock types and provide a reasonable environment of deposition.

**CO-4:** Students apply their mineral identification skills and knowledge of degrees of foliation to identify metamorphic rocks.

**CO-5:** Students will demonstrate an understanding of topographic maps, rules of contours, and the common coordinate systems in use including the public land survey system.

**List of Experiments**

1. Preparation of terrain profile map.
2. Plotting of geological data on terrain map.
3. Preparation of subsurface geological section.
4. Lithological correlations.
5. Preparation of structure contour maps.
6. Preparation of porosity and saturation map.
7. Estimation of reserves.

**Total hours: 40**

**Course Objectives:** To determine experimentally the flow characteristics of fluids and also to determine the efficiency of the flow measuring devices and fluid transport machineries. To give the exposure of all the fluid mechanics equipments and also to visualize the fundamental concept of fluid mechanics.

**COURSE OUTCOME (Skill Development):**

**CO-1:** Identify, name, and characterize flow patterns and regimes.

**CO-2:** Understand basic units of measurement, convert units, and appreciate their magnitudes.

**CO-3:** Utilize basic measurement techniques of fluid mechanics.

**CO-4:** Discuss the differences among measurement techniques their relevance and applications.

**CO-5:** Measure fluid pressure and relate it to flow velocity.

**List of Experiments**

1. Determination of co-efficient of discharge by using Orifice Meter both by experimentally and graphically.
2. Determination of co-efficient of discharge by using Venturi Meter both by experimentally and graphically.
3. Study the performance of a reciprocating pump and to determine the characteristics with maximum efficiency by using Reciprocating Pump.
4. Verify Bernoulli's Theorem Apparatus.
5. Determination of kinematic viscosity and absolute viscosity of lube oil at different temperature by using Redwood Viscometer.
6. Identify the type of flow (Laminar, Transition and Turbulent) by using Reynolds apparatus.
7. Calculation of friction factor by using Darcy Weisbach Equation theoretically.

**Total hours: 40**

**18MCPE39 Health, Safety and Environmental Management in Petroleum Industries 2002**

**Course Objectives:** The course will give an overview of the safety and environmental issues in the petroleum industry. It will provide detailed understanding of the methods and techniques to resolve these key issues for making petroleum production and processing, cleaner and safer. This course would educate the students to identify and assess hazards in any stage of operation, to quantify and manage them as well.

**COURSE OUTCOME: (Employability)**

CO-1: To provide a basic concepts of pollution and types of pollution

CO-2: To provide a detailed study on hazards and its environmental impact

CO-3: To emphasize the impacts on environment from the waste discharged from oil and gas industry

CO-4: To emphasize the various solid waste disposal methods and effluent treatment methods.

CO-5: To impart knowledge about the safety measures involved in it.

**UNIT I: Introduction to pollution 9**

Pollution – air pollution, water pollution, land pollution, noise pollution, Hazards – natural and man-made. Hazards materials used in oil industry, Environmental impact and its consequences, Acts related to pollution.

**UNIT II: Risk Assessment & Management 9**

Waste discharge in onshore and offshore operations, their impact on environment, toxicity, heavy metals, chemicals, drilling fluids, produced water, radioactive elements cuttings and fluid disposal methods, effluent treatment, gas flaring.

**UNIT III: Safety assurance and assessment 9**

Lost circulation zones, differential stuck up, sticky clay, well deviation, high pressure zones, blow-outs, Safety measures. Gas hydrates-high pressure, very low temperatures, drilling hazards.

**UNIT IV: Environmental issues and management 9**

Oil Storage methods at drill site, ground water contamination, well abandonment methods and site restoration, oil spill and leak, remedial measures. Offshore facilities, - hazards and environmental problems.

**UNIT V: Safety measures in design and operation 9**

General, obligations of the owner, operator or Contractor, Safety measures during drilling, logging, production & transportation regulatory procedures and mines act Environment Impact Assessment report case studies.

**Total hours: 45**

### **TEXT BOOKS**

1. Boesch D.F and Rabalis Nancy, “Long term environmental effects of offshore oil and gas Developments”, 7<sup>th</sup> edition, 2003.
2. “Environmental control in Petroleum Engineering” by Reis J.C, Gulf publications, 5<sup>th</sup> edition, 1968

### **REFERENCE BOOKS**

1. Katz D.L. “Natural Gas Engineering (Production & storage)”, TataMcGraw-Hill, Singapore, 6<sup>th</sup> edition, 2007.
2. Smith J.M, “ Chemical Engineering Kinetics”, McGrawHill, 3<sup>rd</sup> edition, 1981.
3. Blake, R.P, “Industrial VSafety”, PrenticeHall, 3<sup>rd</sup> edition, 1953

**Course Objective:**

Using appropriate numerical methods, determine approximate solutions to ordinary differential equations. Analyze the errors obtained in the numerical solution of problems.

**Course Outcome (Skill Development):**

**CO-1:** To apply appropriate algorithms to solve selected problems, both manually and by writing computer programs.

**CO-2:** To compare different algorithms with respect to accuracy and efficiency of solution.

**CO-3:** To appropriate numerical methods, determine the solutions to given non-linear equations.

**CO-4:** Using appropriate numerical methods, determine approximate solutions to systems of linear equations.

**CO-5:** To demonstrate the use of interpolation methods to find intermediate values in given graphical and/or tabulated data.

**UNIT I: Solution Of Equations And Eigen value Problems**

12

Solution of algebraic and transcendental equations –iteration method – Newton Raphson method – Solution of linear system of equations- Gauss elimination method – Gauss-Jordan method–Matrix Inversion by Gauss Jordan method – Eigen value of a matrix by power method.

**UNIT II: Interpolation And Approximation**

12

Interpolation with unequal intervals- Lagrange's interpolation – Newton's Divided difference interpolation– Interpolation with equal intervals- Newton's forward and backward difference formulae.

**UNIT III: Numerical Differentiation And Integration**

12

Approximation of derivatives using interpolation polynomials- Numerical integration using trapezoidal and Simpson's 1/3 and 3/8 rule – Romberg's method

**UNIT IV: Initial Value Problems for Ordinary Differential Equations**

12

Single step methods: Taylor series method – Euler's method-Modified Euler's method– Fourth order Runge – Kutta method for solving first order equations

**UNIT V: Boundary Value Problems In Ordinary and Partial Differential Equation -12**

Finite difference methods for solving two-point linear boundary value problems – Finite difference techniques for the solution of two dimensional Laplace's and Poisson's equations on rectangular domain

**Total Hours: 60**

**TEXT BOOKS:**

1. Grewal, B.S. and Grewal, J.S., "Numerical methods in Engineering and Science", 9th Edition, Khanna Publishers, New Delhi, 2012.
2. Gerald, C. F. and Wheatley, P.O., "Applied Numerical Analysis", 6th Edition, Pearson Education, Asia, New Delhi, 2006.

3. Sivaramakrishna Das.P and Vijayakumari.C, Numerical Analysis, 2014, Pearson Eduaction Limited in south Asia.

**REFERENCE BOOKS:**

1. Chapra, S. C and Canale, R. P., "Numerical Methods for Engineers",Tata McGraw-Hill, New Delhi, 5th Edition, 2007.
2. Sankara Rao K, "Numerical Methods for Scientisits and Engineers", Printice Hall of India, New Delhi, 3rd Edition,2007 .

**Course Objectives:** To introduce the basic concept of Reservoir Engineering, estimation of hydrocarbon volume in place and recovery calculations. Students will be able to gain knowledge of Petroleum Reservoir, fundamentals of petro-physics, interrelation between petro-physical parameters capillary gravity equilibrium and initial fluid distribution.

**COURSE OUTCOME (Employability):**

**CO-1:** To understand the fundamental concepts in reservoir engineering

**CO-2:** To clearly understand the mass balance concepts and equations

**CO-3:** To understand the reservoir pressure maintenance and various recovery mechanisms..

**CO-4:** To be well aware with permeability variation and Darcy laws of fluid flow in porous medium.

**CO-5:** To be aware of well inflow equations and constant terminal solutions

**UNIT I Introduction**

**9**

Introduction to Reservoir Engineering, Basic principles, definitions and data – Reservoir fluids, oil, gas, Gas formation volume factor, oil formation, volume factor, water formation volume factor – oil, gas water, rock compressibility – Resistivity index, wettability and contact angle, effective permeability characteristics, capillary pressure curves – Resistivity factors and saturation exponents. Fluid PVT analysis and oil gas phase behavior.

**UNIT II Reservoirs**

**9**

Formation evaluation – General material balance equations in oil or combination reservoirs, predicting primary recovery in solution – Gas Drive, Reservoirs. Definition and classification of Reserves – methods of estimating Reserves – Production decline curves. Secondary Recovery – pressure maintenance – gas injection – water injection – spacing of wells and well patterns – peripheral or central flooding.

**UNIT III Fluid in reservoirs**

**9**

Fluid flow in reservoirs, Fluid movement in water flooded Reservoirs – Recovery efficiency – Areal or pattern. Sweep efficiency, - Vertical or invasion sweep efficiency, - Permeability variation – Cross flow – Estimates of volumetric sweep efficiency – Estimation of water flood recovery by material balance – prediction methods – Monitoring injectivity, Darcy Law and application.

**UNIT IV Residual oil**

**9**

Recommended methods for assessing residual oil – Existing wells, new wells, Chemical Flooding, Gas injection, Thermal recovery – Well Testing, properties of residual oil, methods of calculating the viscosity.

### **UNIT V Well analysis**

**9**

Well inflow equations for stabilized flow conditions. Constant terminal rate solution of the radial diffusivity equation and its application to oil well testing, water saturation determination, spontaneous determination.

**Total hours: 45**

### **TEXT BOOKS**

1. L.P.Dake L Elsevier, “Fundamentals of Reservoir Engineering”, Development in Petroleum Science. 1980
2. Craft B.C and Hawkins M.F. – Applied Petroleum Reservoir Engineering” 2<sup>nd</sup> Edition. Prentice Hall Englewood Cliffs, N.J., 1991

### **REFERENCE BOOKS**

1. Dake, L.P. Practice of Reservoir Engineering Elsevier 2001.
2. William C.Lyons, Gary J.Plisga “Standard Hand Book of Petroleum & Natural Gas Engineering” Second Edition – (Elsevier), Gulf Publishing, Burlington U.S.A (2005).

3

**Course Objectives:** To impart knowledge on principles of thermodynamics and will be able to apply this knowledge to new situation. To calculate the parameters such as specific heats, vapour pressure and compressibility factor and Calculate the heat of reaction, heat of formation, etc. and will be able to draw the P- T, T-X-Y diagrams for single and multi-component systems.

**COURSE OUTCOME (Employability):**

**CO-1:** Calculate the parameters such as specific heats, vapour pressure and compressibility factor

**CO-2:** Calculate the heat of reaction, heat of formation, etc. and will be able to sketch the **P-T, T-X-Y diagrams for single and multi-component systems**

**CO-3:** Analyse the various parameters for a multi-component system and calculate the equilibrium constant

**CO-4:** Evaluate the hydrocarbon fluid characteristics such as **gas formation volume factor and oil formation volume factor.**

**CO-5:** Convert the given **volumetric analysis into gravimetric analysis** and vice versa; determine the specific heat of mixtures and functioning of a **steam condenser.**

**UNIT I: Introduction**  
9

Behaviour of Gases and Liquids – Gas laws, Density, Mole percent, Weight percent, Volume percent, Specific gravity, Heat, work closed and Open Systems, **First and Second Laws of thermodynamics**, specific heats, compressibility factor, **PVT relationships**, Vapour Pressure, Clausius - Clayperson equation, heat of vaporization.

**UNIT II: Chemical Thermodynamics of Petroleum Hydrocarbons**  
9

Free energy, change, heat of reaction, Entropy change, Heat capacity, Heat of formation, fugacity, Pressure – volume diagram, Density – **Temperature diagram for one and two component systems.** Pressure – Composition diagram, Temperature – Composition diagram, temperature – Composition diagram for multi component system Gibbs phase rule.

**UNIT III: Qualitative phase behaviour of Hydrocarbon systems**  
9

Calculation of liquid and vapour composition of **Bubble point and Dew point pressure for multi component system**, Equilibrium constant. Phase Definitions and the Gibbs Phase Rule, Equilibrium of H<sub>2</sub>O and Hydrocarbon Systems without Hydrates, Equilibrium of H<sub>2</sub>O and Hydrocarbon Systems with Hydrates

#### **UNIT IV: Hydrocarbon Fluid Characteristics**

**9**

Gas information volume factor, Gas solubility, Oil formation volume factor, Viscosity., Types of Gas Reservoirs: Characterizations by phase diagrams- Gas properties calculations **Dry gas properties- Wet gas and condensate gas (above DP) properties** (recombination calculations) Condensate gas properties below DP

#### **UNIT V: Properties of mixtures**

**9**

**Dalton Law Volumetric analysis of a gas mixture** – apparent weight and gas constant – specific of a mixture – determination of calorific values of fuels – oil and fuel vapour mixtures – **steam condenser.**

**Total Hours: 45**

#### **TEXT BOOKS**

1. Smith J.M., H.C. Van Ness, M.M. Abbott, “Introduction to chemical Engineering Thermodynamics”, Tata Mc. Graw – Hill publishing company limited, New Delhi, sixth edition, 2005.

3

**Course Objectives:** The Main aim is to understand the Well Drilling Equipments. The objective of learning this subject is the students will understand the Drilling Process and Drilling operations, Drilling Equipments, Hydraulics and Kill Procedures.

**COURSE OUTCOME: (Employability)**

**CO-1:** To get an introduction about drilling operation and equipments.

**CO-2:** To be well versed with various components for oil and gas drilling.

**CO-3:** To understand the well planning procedures..

**CO-4:** To understand the hydraulic systems in drilling rig.

**CO-5:** To be aware of well shut-down and killing procedures.

**UNIT I Drilling**

9

**Drilling operations** – Location to Rig. Release Well Bore Diagram, Crews – Operator – Drilling, contractor – Third Party Services – Rig Types – Land Types – Marine types, Main offshore fields, Challenges, Effects on environment

**UNIT II Components**

9

**Components-** Overall Drilling Rig, Drilling Sub systems – Power – Hoisting Line – speeds and Loads Power – Loading Components – Drill Pipe, Heavy Weight Drill Pipe (HWDP), Drill String Loads Uni-axial.

**UNIT III Planning**

9

Directional Drilling, Well Planning, Two Dimensional, Horizontal, Tools, Techniques, MWD, surveying – Radius of Curvature, Long's Method – Errors, Mud's, Mud Use, Property measurements, Types, - Pneumatic (Air, Gas, Mist, Foam), Water based, Oil based, solids Control, Definitions, Equipment, Problems, Contaminations Effect.

**UNIT IV Hydraulics**

9

Classifications of Fluids, Rheological Models – Rotary Drilling Hydraulics – Jet Hydraulic Optimizing and Maximizing – Circulations Rate Selection – Drill Bit – Jet Sizing – Equivalent Circulations Density, Hole Cleaning. Theory – Vertical and Deviated Holes, Annular Velocities – Carrying Capacity – Pills and Slugs.

**UNIT V Shut down**

9

Origin of Overpressure, Kick Signs, shut – in Procedures- Drilling—land or bottom-supported offshore rig and Tripping—land or bottom-supported offshore rig, Kill sheets, Kill Procedures, Driller's Methods – Engineer's Method (Wait and Weight)

**Total Hours: 45**

**TEXT BOOKS**

1. Devereux, S., "Drilling Technology", PennWell Publishing Company, 1999.
2. Azar, J.J. and G. Rabello Samuel, "Drilling Engineering", PennWell Corporation, 1937.
3. Devereux, S., "Practical Well Planning and Drilling", PennWell Corporation, 1998.

2. Rabia.H., "Oil Well Drilling Engineering, Principles And Practices' Graham And Trotman Ltd. 1985
3. Donald P.Helander 'Fundamentals Of Formation Evaluation', OGC Publications, 1983

**Course Objectives :** The main aim is to understand the fundamentals of drilling fluids and cementing technology. The objective is that students will be able to understand the different types of drilling fluids used in the drilling process and different stages of cementing techniques.

**COURSE OUTCOME: (Employability)**

**CO-1:** Student will understand the basic function of drilling fluids and cementation.

**CO-2:** Student get a deep knowledge about the different types of drilling fluid.

**CO-3:** Student will understand the cement and additives of it.

**CO-4:** Student will obtain a deep knowledge of cementing techniques.

**CO-5:** Student obtains knowledge about the parameters plays a role in cementing operation.

**UNIT I Introduction**

12

Introduction - basic functions and properties of drilling fluids and cement slurries. Compositions and related properties of drilling fluids and cement slurries, Portland cement-general, cement chemical nomenclature and other abbreviations

**UNIT II Drilling fluids**

12

Drilling fluid – Classification of drilling fluids, functions of drilling fluids, composition of drilling fluids, properties of drilling fluids - Drilling fluid additives. Selection factors for drilling fluid and mud handling equipment.

**UNIT III Cements**

12

Composition of Portland cement, Cement Testing, and Standardisation of drilling Cements, Types of equipment and methods used in cementing operations. Composition of different forms of cements and cement additives.

**UNIT IV Cementing Procedures**

12

Well cementing – chemistry of cements. Cementing principles – primary cementing, secondary cementing, linear cementing, plug cementing, and single stage cementing, multistage casing cementing. Offshore Cementing.

**UNIT V Analysis**

12

Determination of torque and drag. Calculation of cutting transport efficiency. Gas migration through cement columns. Thermal Cements – Geothermal Well cementing. Cement Job design. Calcium hydroxide content in cement,

**Total hours: 60**

3

**Course Objectives:** To develop the students' understanding in environmental related issues such as environmental, air, water and soil pollution, need for public awareness, natural resources and biodiversity, Renewable and non-renewable resources, threats to biodiversity, etc.

**COURSE OUTCOME (Employability):**

**CO-1:** Student will understand the nature and facts about environment.

**CO-2:** Student obtains the knowledge about the interrelationship between living organisms and environment.

**CO-3:** Students will get a deep knowledge about the cause and control measures of the air pollution

**CO-4:** Students will get a deep knowledge about the cause and control measures of the water pollution.

**CO-5:** Student obtains a knowledge about the various resources and biodiversity.

**UNIT I Environmental awareness**

Environmental awareness: Multidisciplinary nature of environmental Science, Definition, Scope, Importance and need for public awareness. Ecology and Environment: Concept of an ecosystem, structure and function of an ecosystem, producer consumer and decomposer, energy and nutrient flow biogeochemical cycles, food chain, food web, ecological pyramid.

**UNIT II Environmental Pollution**

**Environmental Pollution:** Segments of environment, sources, pathways and face of environmental pollutants, causes of environmental pollution - physical, chemical and biological transformation of pollutants, population explosion, environment and human health, human rights, value education, women and child welfare.

**UNIT III Air Pollution**

**Air Pollution:** Various segments of atmosphere and their significance, classification of air pollutants, toxic effects, sampling and analysis, stationary and mobile emission, sources and their control, photochemical smog, sulphurous smog, green house effect, global warming, ozone depletion, Air (prevention and control of pollution) Act.

**UNIT IV Water pollution**

**Water pollution:** Water resources, sources of water pollution, various pollutants, their toxic effect, portability of water, municipal water supply, disinfection, characteristics of waste, primary and secondary waste water treatment, BOD and COD measurement and their significance, rain water harvesting, water shed management, Water

(pollution and control) Act.

**UNIT V Natural Resources and Biodiversity**  
**9**

Natural Resources and Biodiversity: Renewable and renewable resources, Forest resources, consequences of deforestation, floods and draughts, equitable use of resources for sustainable development. Dams benefits and problems. **Biodiversity**: Ecosystem diversity, threats to biodiversity, conservation of biodiversity. A brief introduction to Noise Pollution, Soil Pollution, solid **Waste Management**.

**Total hours: 45**

**TEXT BOOK**

**REFERENCE BOOKS**

1. De AK. Environmental Chemistry, Wiley Eastern Ltd.
2. Miller T.G. Environmental Science, Wadsworth Publishing Co. (TE) Sharma B.K.2001, Environmental Chemistry, Gael Publishing House, Meerut Odem

**Course Objectives:** In the core analysis lab the students will learn experimentally the properties of rocks, Identification of Minerals, Porosity Determination, determination of Permeability, Determination of Saturation etc.,

**COURSE OUTCOME(Skill Development):**

**CO-1:** To identify different minerals and rocks.

**CO-2:** To measure the physical properties of various fluids.

**CO-3:** To determine the rock properties.

**CO-4:** To evaluate different fluid properties.

**CO-5:** To analyse different rock and its physical properties.

**List of Experiments:**

- 1 Identification of Minerals
- 2 Determination of Saturation, Dean-Stark distillation method
- 3 Measurement of fluid density using the pycnometer
- 4 Liquid viscosity measurement using capillary type viscometer
- 5 Porosity determination by liquid saturation method
- 6 Resistivity measurements of fluid-saturated rocks
- 7 Absolute permeability measurement of water
- 8 Contact angle measurement using imaging method
- 9 Capillary pressure measurement using centrifuge
- 10 Study of Rock Properties

**Total hours: 40**

**COURSE OBJECTIVE:** The aim of this lab to provide hands on training of the equipment used in the field to know the behavior of the drilling fluids at various conditions.

**COURSE OUTCOME(Skill Development):**

**CO-1:** Student can able to understand the physical properties of **drilling mud** at to be used at various conditions

**CO-2:** Student will obtain the knowledge about the behavior of mud.

**CO-3:** Student obtain the knowledge about the importance of the **mud density**

**CO-4:** Student get the knowledge about the importance of **gel strength and pH** of mud during drilling.

**CO-5:** Student will come to know the importance of **viscosity** of mud for lifting the rock cuttings.

**List of Experiments**

1. To prepare the **WBM/OBM** drilling fluids.
2. To determine the **density** of water based mud prepared.
3. To determine the **viscosity** of water based mud prepared.
4. To determine the hydrogen ion concentration of the water based mud prepared.
5. To determine the viscosity of **oil based** prepared.
6. To determine the **resistivity** of a drilling mud prepared
7. To determine the gel strength of the sample by **penetrometer**
8. To determine the density of cement slurry prepared.

**Total Hours: 40**

**COURSE OBJECTIVE:** Providing value education to improve the students' character - understanding of principled life and physical health - maintaining youthfulness - measures and methods in five aspects of life.

**COURSE OUTCOMES (Skill Development):**

After successful completion of the Basic Life Skills course, the student will be able to

**CO-1:** Develop **communication competence** in prospective engineers.

**CO-2:** Explain the **moral value of human's life** and their psychological background.

**CO-3:** Instill moral and social values, loyalty and also to learn to appreciate the rights of others.

**CO-4:** Provide value education to improve the health by yoga etc.

**CO-5:** Understand the **concept of negative and positive energies**, measurement and method in five aspects of life.

**UNIT I Physical Health**

6

1. Manavalakalai (SKY) Yoga: Introduction - Education as a means for Simplified Physical Exercises: Hand, youth empowerment - Greatness of Education - **Yoga for youth Empowerment.**
2. Leg, Breathing, Eye exercises - Kapalabathi, Makarasana Part I, Makarasana Part II, Body Massage, Acu pressure, Relaxation exercises - Benefits.
3. Yogasanas: Pranamasana - Hastha Uttanasana - Pada Hasthasana - AswaSanjalana Asana - Thuvipatha asva Sanjalana asana - Astanga Namaskara - Bhujangasana - Atha Muktha Savasana - Aswa Sanjalana Asana - Pada Hasthasana - Hastha Uttanasana - Pranamasana.
4. Pranayama : Naddi suddi - Clearance Practice - Benefits.

**UNIT II Life Force**

6

1. Reasons for Diseases - Natural reasons (Genetic / imprints, Planetary Position, Natural calamities and climatic changes) - Unnatural reasons (Food habits, Thoughts, Deeds)
2. **Philosophy of Kaya kalpa** - Physical body - Sexual vital fluid - Life force - Bio-Magnetism - Mind.
3. Maintaining youthfulness : Postponing old age - Transformation of food into seven components - Importance of sexual vital fluid -
4. Measure and method in five aspects of life - Controlling undue Passion.
5. Kayakalpa practice - Aswini Mudra - Ojas breath - Benefits of Kaya Kalpa.

**UNIT III Mental Health**

6

1. Mental Frequencies - Beta, Apha, Theta and Delta wave - **Agna Meditation**

explanation - benefits.

2. Shanthi Meditation explanation - Benefits
3. Thuriya Meditation explanation - Benefits
4. Benefits of Blessing - Self blessing (Auto suggestion) - Family blessing - Blessing the others - World blessing - Divine protection

#### **UNIT IV Values**

**6**

- Human Values:
  - 1) **Self control** - Self confidence - Honesty
  - 2) Contentment - Humility - Modesty
  - 3) Tolerance - Adjustment - Sacrifice - Forgiveness
  - 4) Purity (Body, Dress, Environment) - Physical purity - Mental purity - Spiritual purity
- Social Values:
  1. Non violence - Service
  2. Patriotism - Equality
  3. Respect for parents and elders - care and protection - Respect for teacher
  4. **Punctuality - Time Management**

#### **UNIT V MORALITY (VIRTUES)**

**6**

1. Importance of Introspection - I - Mine (Ego, Possessiveness).
2. Six Evil Temperaments - Greed - Anger - Miserliness - Immoral sexual passion - Inferiority and superiority Complex – Vengeance.
3. Maneuvering of Six Temperaments - Contentment - Tolerance - Charity - Chastity - Equality - Pardon (Forgiveness).
4. Five essential Qualities acquired through Meditation: Perspicacity - Magnanimity - Receptivity - Adaptability – Creativity.
5. **Improved Memory Power - Success in the Examination.**

**TOTAL: 30 Hours**

#### **REFERENCE BOOKS:**

1. Vethathiri Maharishi, 16<sup>th</sup> Edi.2013, Yoga for Modern Age, Vethathiri Publications, Erode.

7. Iyengar, B.K.S. 2008, Light on Yoga, Noida, UP India, Harber Collins Publishing India Ltd.

**Course Objectives:**

The aim of this subject is to understand and follow the reservoir concepts such as reservoir simulation, rock characteristics and reservoir management. The main objective is to provide a knowledge to interpret cross-plots, well characteristics, simulation and gas condensate reservoirs.

**Course Outcomes: (Employability)**

**CO-1:** Students can able to predict the performance of the reservoir by interpretation of cross plots and stimulation techniques. Students can able to know how do the production pattern changes based upon reservoir characteristics.

**CO-2:** Students will acquire the knowledge of flow behavior in the reservoir system.

**CO-3:** Students will get the knowledge about the performance of well based upon phases of fluid existing in the reservoir. They can able to get the knowledge of production potential of the reservoir through several tests.

**CO-4:** Students can able to provide an idea to maintain the production level to meet the demands. Students can able to provide a detailed report on amount of reserves in the formation and the amount of fluids which can be recoverable economically.

**CO-5:** By mathematically students can able to provide a detailed report on fluid flow behavior based upon the reservoir pressure.

**UNIT- Introduction**

9

Fluid characteristics. Introduction to the production system. Characteristics of the reservoir rocks. Porosity, Permeability cross plots. Fluid saturation, capillary pressure, gas material balance- recovery factor.

**UNIT - II Reservoir Flows**

9

**Multiphase flow:** Relative permeability: fractional flow. **Well performance** – inflow performance, tubing performance. **Derivation** of the basic radial flow equation, conditions of solution.

**UNIT – III Well Testing**

9

**Well testing** – Basic well testing theory – oil well testing: gas well testing – **Practical well testing** – Gas field reservoir engineering – Fluid phase behavior – Gas in place **volumes and recovery estimations**. **Reservoir testing and performance analysis:** well test – drill stem tests (DST); production tests, pressure tests on gas wells; formation interval testing and other well testing techniques. **Coning of water and gas; effects** of partial penetration.

**UNIT – IV Material balance techniques**

9

**Material balance techniques:** Production forecasting – Gas condensate reservoir engineering Fluid phase behavior development – options. Reservoir drive mechanisms, solution gas drive, gascap drive.

**UNIT – V Reservoir Simulation**

9

Well performance – **Reservoir management and simulation** – reservoir data acquisition Reservoir simulation. Mathematical basis of bottom hole analysis; **Differential equations for radial flow** in a porous medium. **Pressure drawdown and buildup analysis.**

**Total Hours: 45**

**TEXT BOOKS**

1. Ahmed, T, "Reservoir Engineering Handbook", 3rd Edition, Elsevier, 2006.
2. Slip Slider, H.C. "World wide Practical Petroleum Reservoir Engineering Method, Penn Well Publishing Company, 1983.
3. Amyx, J.W. et al. "Petroleum reservoir engineering" – Mc.Graw-hill-1998.

**REFERENCE BOOKS**

1. Gianluigichierici, "Principles of Petroleum Reservoir Engineering", Elsevier, 1994.
2. Archer, J. and Wall C.C. "Petroleum engineering principles and practice", kluwer 1990.
3. Craft B.C. and Hawkins M. P. "Applied Petroleum reservoir engineering" 2-nd Edition Prentice hall –1991.

**Course Objectives:**

The aim of this subject is to understand and follow the concepts of oil and gas production techniques. The student will be able practice both theory and practical of different production operations in the oil and gas wells such as artificial lifts and subsurface equipments.

**Course Outcomes: (Employability)**

**CO 1:** Students can predict the productivity of the various state of the reservoir fluids.

**CO 2:** Students will understand the behavior performance of the well based upon various systems.

**CO 3:** Students can understand the surface facilities and the processing of the reservoir fluids.

**CO 4:** Students will get a deep knowledge of the treatment process and flow measurement system.

**CO 5:** Students will obtain the knowledge about the performance of the well for various system.

**UNIT I Components**

9

Components of the petroleum systems. Well productivity engineering. Production from under saturated oil reservoirs. Production from two-phase reservoirs. Production from gas reservoirs. Pseudo critical properties of natural gases. Gas well deliverability for non – Darcy flow.

**UNIT II Well Performance**

9

The near-well bore condition and damage characterization, the effect of perforation conditions on well performance. Wellbore flow performance, Well deliverability, Wellhead surface gathering systems, Artificial lift systems Horizontal well production. System analysis, Production Chemistry Basics (Wax, Scale, Corrosion, Emulsions).

**UNIT III Equipments**

Surface equipment and operations. Flow control and well heads. Gathering systems; service and cleaning systems; design and testing of flow lines. Separation and separators; separator components, stage separation; design and construction of separators. Meeting - Oil and gas metering techniques.

**UNIT IV Measuring System**

9

Flow measurement system; liquid level controllers. Emulsion problems; oil emulsions; emulsifying agents and de-emulsifiers, choice and dosage of de-emulsifiers, heat treatment, heat treaters, desalting, oil storage and tank farms. Gauging, sampling and quality control. Underground storage – caverns. Water disposal, corrosion. Water injection systems. Sub-surface equipment.

**UNIT V Analysis**

9

Well completion techniques and equipment, drill stem test (DST) flowing well performance, vertical lift performance, Optimum size tubing and chokes, production forecast for a pool. Design and analysis of artificial methods of petroleum production. Work over and sand exclusion technique.

**Total hours: 45**

2. Guo, B, Lyons, W.C. and Ghalambor, A., "Petroleum production Engineering- A computer assisted approach", Gulf Professional Publishing, Burlington, 2<sup>nd</sup> edition, 2009.

**Course Objectives:** This course is to provide a working knowledge of the current methodologies used in well testing and the concepts of porosity and permeability. Also to estimate oil, gas, and water properties pertinent for well test analysis using industry accepted correlations and/or laboratory data.

**Course Outcomes: (Employability)**

**CO 1:** Students will get the knowledge about the purpose and uses of the well testing.

**CO 2:** Students will obtain the knowledge about the application of various well testing techniques.

**CO 3:** Students get the knowledge about the analysis and interpretation of the well testing data.

**CO 4:** Students will understand the techniques and the methodology for testing the gas well.

**CO 5:** Students will get the idea of interpreting the gas well data.

#### **Unit I Introduction**

9

Role, History and uses of well test, Well test data acquisition, analysis, and management, Selection of wells for optimum stimulation treatment, Reservoir system characterization process, Scope and Objective of well test. Numerical models and their application, Well test and its types, well testing in different phases of well.

#### **Unit II: Well testing methods and their analysis.**

9

Flow test, RFT, FIT, Drill Stem test, Drawdown test, Multi rate test, Pressure Build Up Test, Bankers Test, Interference test operation and their analysis and interpretation. Well testing methods for Horizontal well and Naturally fractured reservoirs

#### **Unit IV: Well Test Interpretation**

9

Flow Equation, Well Test Interpretation model and its analysis, Radius of investigation, Skin, Well bore radius, Flow efficiency and Damage ratio; Production logging. Case study and Numerical problems.

#### **Unit IV: Gas well testing**

9

Gas well testing: Pseudo Pressure, Pseudo time, AOF, Isochronal, modified Isochronal, interpretation and analysis.

#### **Unit-V: Curve analysis of well test**

9

Decline curves; APRs equation, Harmonic, Hyperbolic, and Exponential Decline curves, Fetkovich, Blasingame type curves.

**Total hours: 45**

3. Earlougher,R.C., “Advances in Well Test Analysis”, Monograph Series, SPE, 1977

**Course Objectives:** To impart knowledge about the selection and evaluation of processes used to dehydrate natural gas, meet hydrocarbon dew point specifications and extract NGLs. To learn about the application of gas engineering and technology in facilities and gas plants.

**Course Outcomes (Employability):**

Students will be able in

**CO1:** Formulating the design procedure and selection of Horizontal and Vertical Separators.

**CO2:** Selecting the types of compressors and power calculation.

**CO3:** Analyzing the Amine absorption process and associated equipments.

**CO4:** Implementing the selection of solid bed dehydration and glycol dehydration processes.

**CO5:** Describing the design of fractionator and to discuss refrigeration and recovery unit operating problems.

**Unit I Concepts of Natural Gas Processing, Phase Separation 9**

Introduction – process modules – scope of natural gas processing – phase separation – general description - gravity separator - description & design procedure of horizontal separator – selection of separator- advantages and disadvantages of horizontal separator – problems - description & design procedure of vertical separator – advantages and disadvantages of vertical separator –problems.

**Unit II Condensate Stabilization & Compression 9**

Introduction – process of condensate stabilization –introduction – types of compressors – selection of compressor – advantages of compressor – design procedure – power calculation, condensate hydro treating, effluent treatment.

**Unit III Acid Gas Removal 9**

Introduction – acid gas removal processes – design considerations – amine absorber – pumps – flash tank – reboiler – stripper – condenser – lean/rich exchanger – cooler – declaimer – design procedure

**Unit IV Dehydration 9**

Introduction – water content determination – solid desiccant – selection and characteristics of desiccant- process – design procedure, glycol dehydration, solid-bed dehydration, gas dehydration process selection.

**UnitV VNGL's 9**

Introduction – process- operation – types – design of Fractionator, recovery technology development, recovery unit design considerations, recovery unit operating problems, refrigeration's, recovery processes.

**Total hours: 45**

### **TEXT BOOKS**

1. Katz D.L. "Natural Gas Engineering (Production & storage)", Tata McGraw Hill Singapore, 4<sup>th</sup> edition, 2009.
2. Alireza Bahadori, Natural Gas Processing Technology and Engineering Design, Ph.D. School of Environment, Science and Engineering, Southern Cross University, Lismore, NSW, Australia.

### **REFERENCE BOOKS**

1. Dipl.-Ing. Klaus H. Lüdtke (auth.) Process Centrifugal Compressors: Basics, Function, Operation, Design, Application; 2004

**COURSE OBJECTIVES:** To introduce various methods of analysis by using sophisticated instruments and analytical equipments to determine various physical properties of crude, natural gas, petroleum products and petro-chemicals. On completion of the course the students should be conversant with the theoretical principles and experimental procedures for quantitative estimation.

**Course Outcomes (Skill Development):**

Students will be able to

**CO 1:** Perform the various physical and chemical properties of the petroleum products in a safe manner.

**CO 2:** Differentiate various petroleum products by performing the specific tests.

**CO 3:** Also able to handle various apparatus/equipment in determining the physical and transport properties of different petroleum products.

**CO 4:** Students will be able to analyze the various products of petroleum components.

**List of Experiments:**

1. Aromatic content Determination
2. Carbon residue determination
3. Karl-Fisher Conduct meter Apparatus for water estimation
4. Foaming characteristics of lubeoil
5. Mercaptan as Sulphur estimation
6. Corrosion testing of petroleum oil sand copper
7. Freezing point of Aqueous Engine coolant solution
8. Automatic Vacuum Distillation
9. Characteristics of Hydrocarbon types in Petroleum products
10. Coking tendency of oil
11. Saybolt calorimeter of petroleum products
12. Water separately of Petroleum products.

**Total hours: 40**

**Course Objectives:** To understand various products derived from crude oil, to analyze and solve practical problems Reservoirs- drilling, completion, workover and production field practices and provide solution by designing appropriate systems.

**Course Outcomes (Skill Development):**

CO 1: The students will become conversant in experimental procedures to acquire process, analyze and interpret the reservoir and reservoir fluid data.

CO 2: Students will be able to stabilize flow rate through IPR and TPR curves.

CO 3: This laboratory work makes the students become good reservoir engineers.

CO 4: Students will be able to analyze and create representative reservoir models using open source softwares.

**List of Experiments:**

1. Interpretation and determination of oil viscosities from Reservoir data.
2. Determination of reservoir heterogeneity
3. Determination of gas compressibility
4. Determination of Bubble Point pressure
5. Construction of Relative permeability graphs
6. Estimation of vertical sweep efficiency at breakthrough
7. Determination of stabilized flowrate through IPR and TPR.
8. Familiarization of reservoir engineering software.

**Total hours: 40**

## Industrial Visit/NSS

### Course Objective (Employability & Skill Development) :

Industrial visit has its own importance in a career of a student who is pursuing a professional degree. It is considered as a part of college curriculum. The objective of an industrial visit is to provide us an insight regarding internal working of companies. We understand that theoretical knowledge is not enough for a successful professional career. With an aim to go beyond academics, industrial visit provides students a practical perspective of the work place. Industrial visits provides an opportunity to learn practically through interaction, **working methods and employment practices**. It gives students an exposure to current work practices as opposed to possibly theoretical knowledge being taught at college. Industrial visits provide an excellent opportunity to interact with industries and know more about **industrial environment**. Industrial visits are arranged by VISTAS with an objective of providing us an opportunity to explore different sectors like IT, Manufacturing services, finance and marketing. Industrial visit helps to combine theoretical knowledge with practical knowledge. Industrial realities are opened to the students through industrial visits.

After successful completion of the Personality NSScourse, the student will be able to

**CO1:** Understand themselves in relation to their community and develop among themselves since of **social and civic and responsibility**.

**CO2:** Identify the needs and problem of the community and involve them in problem solving.

**CO3:** Utilize their knowledge in finding practical solution to individual and community problem.

**CO4:** Develop the confidence require for group living and sharing of responsibilities of acquire **leader ship qualities and democratic attitudes**.

**CO5:** Develop the capacity to meet emergencies and natural disasters and practice national integration and social harmony

**Course Objectives:** The main of learning this subject is that student will be able understand the Basic reservoir characterization, modeling and simulation methods used in oil industry. The objective of this subject is that student will be able to follow and utilize the different concepts of reservoir modeling and characteristics and their usage.

**Course Outcomes (Employability):**

Students will be able to

**CO1:** Evaluate petro-physical parameters from well logs and predict hydrocarbons in place by reservoir mapping and characterization.

**CO2:** Construct reservoir model by history matching, upscaling, kriging, variograms, and geostatistics to quantify and qualify the hydrocarbon.

**CO3:** Acquire the Basics knowledge of Reservoir Modeling Softwares, log management and correlation to predict hydrocarbon bearing zone.

**CO4:** Familiarize and understand various basic concepts of reservoir management, managerial economics, HELP and JVs.

**CO5:** Predict the phenomenon of various multiphase flows and flow assurance.

**UNIT - I: Introduction**

9

Overview of reservoir characterization and modeling problems. Reservoir mapping. 3D modeling. Univariate, bivariate and multivariate statistics for geological data analysis. Pattern recognition techniques. Petrophysical predictions from well logs. Introduction to petroleum geostatistics. Variograms, Kriging, Uncertainty quantification.

**UNIT - II: Reservoir modeling**

9

Stochastic reservoir modeling. Sequential simulation. Gaussian simulation. Indicator simulation. Integrating seismic attributes, well tests and production data. Constraining reservoir models with various sources of information. Reservoir up girding and upscaling. Reservoir simulation – Investigation of petroleum reservoir characteristics and behavior, includes: pore volume, fluid distribution and movement, and recovery. The result of simulation studies include optimized field development and management plans which maximize the value and/or reserves of producing properties. Finite difference approximations to the diffusivity equation and the application of those approximations for reservoir simulations. Practical use of reservoir simulation.

**UNIT - III: Reservoir characterization**

9

Pressure transient interpretation. Seismic reservoir characterisation. Log management, correlation and petrophysical analysis. Geology correlator probe-AVO Reservoir Characterization. Software used in reservoir characterization and modeling.

**UNIT - IV: Reservoir management**

9

Concepts of reservoir Management – definitions, objectives of management, synergy and team efforts – International business management of joint ventures. Reservoir Management process- Setting goals, developing plan and implementation, Managerial economics, Estimation of production potential.

**UNIT -V: Flow assurance**

9

Flow assurance – Identifications of drive mechanism – Bottom hole pressure Management – Forecasting economic scenario. Dynamic reservoir modeling – concept of relative permeability – PVT relationships – Phase behavior – Reserve estimation for identified prospects.

**Total hours: 45**

**TEXT BOOKS**

1. John R. Fanchi, "Principles of Applied Reservoir Simulation", 3<sup>rd</sup> Edition, 2006.
2. Moody, G.B. Slip Slider, H.C. "Petroleum Exploration", Hand Book "World wide Practical Petroleum Reservoir Engineering Method", Penn Well Publishing Company, 1983.

**REFERENCE BOOKS**

1. Standard Hand Book of "Petroleum & Natural Gas Engineering" – 2<sup>nd</sup> Edition 2000  
William C. Lyons & Gary J. Plisga - Gulf professional publishing comp (Elsevier).

**Course Objectives:** The main aim of the subject is to give an in depth knowledge about various methods of evaluating the drilled formations and understand the well logging theory and practicing methods. The objective of this course is to have in-depth knowledge is GR logging, SP logging, NMR logging and will be able to interpret different cross plots.

**Course Outcomes(Employability):**

**CO1:** Evaluate Petro-Physical parameters and rock properties from borehole geophysics.

**CO2:** Quick Look Analysis and evaluation on various geological logs.

**CO3:** Interpret Cement Bond Log and basic Production Logs, determine lithology from M-N cross plot.

**CO4:** Analyze and subsurface correlation of log data for log interference.

**CO5:** Identification and understanding of various log responses.

**UNIT – I Formation of wells**

9

Definitions of Formation, GTO, cuttings and cores, sampling, testing methods, mud logging/Geo-logging units. Borehole conditions, fundamentals of borehole geophysics, reservoir rock properties, formation parameters, porosity, permeability, resistivity, water and hydrocarbon saturations, movable oil saturations, Archie's and Humbles equation.

**UNIT – II Geological logs**

9

Principles, instrumentation, operational procedures and applications of different geophysical logs: S.P., electrical, induction, nuclear, sonic, caliper, temperature, dip and direction. Natural gamma ray spectrometry log, nuclear magnetic log, litho density log, neutron activation technique, thermal neutron decay time log, chlorine and oxygen logs.

**UNIT – III Log Analysis**

9

Recording, transmission and processing of log data. Formation evaluation for hydrocarbons. Qualitative and quantitative interpretations of well log data. Overlays and cross-plots. Lithology determination by neutron, density and sonic cross-plots, dual mineral method, triporosity method, litho porosity cross-plot (M-N plot), clean sand and shaly sand interpretations.

**UNIT – IV Log Inference**

9

Sub-surface correlation and mapping from log data. Delineation of fractures from logs. Production logging. Well logging for metallic and non-metallic minerals: radioactive and non-radioactive evaporates, coal, sulphur. Borehole geophysics for groundwater exploration. Effective pay thickness of an aquifer. Saline water-fresh water interface from log data.

**UNIT – V Identification and Interpretation**

9

Theoretical computations of normal and lateral log responses. Identification and delineation of sub-surface formations from well log data. Calculation of reservoir parameters: formation factor, porosity, permeability, resistivity, water and hydrocarbon saturations, and movable oil saturation. Sub-surface correlation of formations and interpretation of field data.

**18PCPE63**

**Enhanced Oil Recovery & Water flooding**

**3 0 0 3**

**COURSE OBJECTIVES:** The main of the learning the subject is that student will be able to understand. The basic of oil recovery methods in oil & gas Industry. Students will be able to get the clear idea, better understanding and can get introduced with Different types of recovery methods which are employed in the oil and gas Engineering.

## Course Outcomes: (Employability)

Students will be able

**CO 1:** To create an information about the basic concepts of Enhanced Oil Recovery Mechanisms.

**CO 2:** To provide a detailed knowledge about the various EOR techniques followed in oil and gas industry.

**CO 3:** To emphasize the concepts of miscible displacement of hydrocarbon and its application of it.

**CO 4:** To emphasize the design concepts and selection criteria of CO<sub>2</sub> flooding.

**CO 5:** To emphasize the concepts of chemical oil recovery method and its application of it.

### UNIT I Introduction 9

Enhanced oil recovery methods – Definition – Schematic representation of enhanced oil Recovery – Techniques involved in EOR – Chemical flooding – Hydrocarbon or Gas injection – Thermal recovery methods.

### UNIT II Miscible Displacements 9

Miscible Displacements- Miscible Slug Process, Enriched-Gas Drive, High-Pressure Gas Injection- Nitrogen and Flue Gas Flooding- CO<sub>2</sub> Miscible Process, Laboratory Designs for a CO<sub>2</sub> Flood, Criteria for gas injection.

### UNIT III Oil Recovery 9

Chemical oil recovery methods – Polymer Flooding, Foam Flooding, Surfactant/ MP Flooding, Alkaline flooding, ASP Flooding, Laboratory design for Chemical Flooding, Criteria for chemical recovery methods.

### UNIT IV Combustion 9

Thermal recovery – In-Situ Combustions- Dry Forward Combustion, Reverse Combustion, Wet Combustion, Steam Injection Processes-Screening criteria for steam flood prospects, Oil recovery calculations of Steam Displacement, Mechanism of Steam Stimulation and Steam Displacement– criteria for thermal methods, Steam Assisted Gravity Drainage.

### UNIT V EOR Methods 9

Microbial EOR methods (MEOR)-Definition and Classification of MEOR- Cyclic microbial recovery. Microbial Flooding, Mechanisms of MEOR, Advantages and disadvantages of MEOR

**Total hours: 45**

**18PCPE64**

**Heat & MassTransfer Practical**

**0 0 31**

**Course Objectives:** This course is to introduce the basic principles of heat and mass transfer with emphasis on their analysis and applications to practical engineering problems. Also, to identify important thermal processes, and derive the basic expressions for heat conduction, convection and radiation based on the First Law of Thermodynamics.

## Course Outcomes (Skill Development):

At the end of the course, the student will be able to:

**CO1:** Apply Fourier's law to validate the theoretical over all heat transfer coefficient.

**CO2:** Apply Stefan-Boltzmann law of radiation and emissivity relation.

**CO3:** Determine thermal properties of material by applying 1-D steady state heat transfer equation.

**CO4:** Apply non-dimensional numbers to evaluate and validate heat transfer parameters.

## List of Experiments

1. Heat Transfer from a Pin-Fin Apparatus
2. Heat Transfer through Composite Wall
3. Critical Heat Flux
4. Emissivity Measurement Apparatus
5. Heat Transfer through the Lagged Pipe
6. Thermal Conductivity of Metal Rod
7. Heat Transfer in Natural Convection
8. Parallel Flow/Counter Flow Heat Exchanger
9. Heat Transfer in Forced Convection

**Total hours: 40**

**Course Outcomes (Skill Development):**

Students will be able to

- CO1:**Familiarize and practice for **Personal Safety and Social Responsibilities basic induction training**.  
**CO2:**Understand Outlines precautions for **Fire Prevention and Fire Fighting techniques**.  
**CO3:**Apply practically Personal Survival Techniques to protect individuals and themselves in emergency situations.  
**CO4:**Understand of **Elementary First Aid for life-saving skills**.  
**CO5:** Evaluate Proficiency in **Security Awareness for safety purpose**.

**Standards of Training, Certification and Watch-keeping (STCW)****1. Personal Safety and Social Responsibilities**

A classroom-based course covering basic induction training in safety procedures and accident prevention, it also familiarises novices with the employment conditions and **working environment on board**.

**2. Fire Prevention and Fire Fighting**

Outlines precautions for minimising the risk of fire, the causes of fires and how to extinguish them. Also practical training using **fire fighting equipment and breathing apparatus** to extinguish various types and sizes of fires.

**3. Personal Survival Techniques**

Teaches the actions to be taken by individuals to protect themselves in emergency situations and includes practical training using **life jackets and inflatable life rafts**.

**4. Elementary First Aid**

A combination of theory and practical training for **basic first aid and life-saving skills**.

**5. Proficiency in Security Awareness**

Providing knowledge, understanding and proficiency to **personnel intending to work on ships** who will not have any designated security duties.

**Total hours: 40**

**Course objectives:**

This programme will give the students a taste of real life problem solving in industries. On completion of the internship the students must be able to know about –applications in planning and development, industrial ecology for environment planners, industry planners, public utilities/energy managers

**Course Outcomes:(Employability)**

The student shall be able to independently carryout the following tasks:

**CO1:** Work safely in Industrial environment.

**CO2:** Work with various interest groups, disciplines, professionals, managers, technicians etc.

**CO3:** Polish the engineering skills by applying the knowledge in day-to-day operation, troubleshooting and minor-modifications.

**CO4:** Building relations with University and Industry that will help mutual cooperation over long-term.

**Course Objectives:**

To develop the students ability to prepare the industrial project report. These software tools will be beneficial in analyzing the raw technical data and draw conclusions accordingly. These software applications are practical oriented and industry requirements expertise in this entirely depends on its practice.

**COURSE OUTCOME:(Skill Development):**

CO1: Create 2D and 3D computer drawings and models for manufacturing and prototyping.

CO2: Evaluate computer aided design models and assemblies based on critical thinking and problem solving skills.

CO3: Collaborate with people of diverse backgrounds and abilities.

CO4: Develop a solution through group work.

CO5: Communicate and present ideas and solutions to design problems.

Below are some basic features of these software tools.

**AUTOCAD** is a computer-aided design software program used extensively in all the engineering firms. AutoCAD allows the user to create 2D (two-dimensional) and 3D (three-dimensional) technical drawings using visualization and technical documentation. This software program increases productivity in manufacturing and design, replacing the need for manual drawings and designs. These days most of the engineering companies use AUTOCAD to ramp up productivity on design and manufacturing technologies. It is used to design and create accurate digital prototypes for a wide variety of oil and gas equipment as well.

**Application in Petroleum Engineering:** This design software will make students understand the workflow across all sections of the oil and gas industry. They can utilize this skill to enhance the industrial project report and provide higher quality documentation.

**Conducting the course:** The training in AUTOCAD software should include teaching classes, lab sessions along with user manual provided to the students. Once students are comfortable with 2D model features, the course can be upgraded to 3D version.

**Total hours: 40**

**Course Objectives:**

To impart and create an awareness among students on Engineering Ethics and Human Values. To understand social responsibility of an Engineer. To appreciate ethical dilemma while discharging duties in professional life.

**Course Outcomes: (Employability)**

CO1: Distinguish between ethical and non ethical situations

CO2: Practise moral judgment in conditions of dilemma

CO3: Relate the code of ethics to social experimentation

CO4: Develop concepts based on moral issues and enquiry

CO5: Resolve moral responsibilities on a global context.

**Unit I: Human Values**

9

Morals, Values and Ethics – Integrity – Work Ethic – Service Learning – Civic Virtue – Respect for Others – Living Peacefully – caring – Sharing – Honesty – Courage – Valuing Time – Co-operation – Commitment – Empathy – Self-Confidence – Character – Spirituality.

**Unit II: Engineering Ethics**

9

Senses of 'Engineering Ethics' - variety of moral issues - types of inquiry - moral dilemmas - moral autonomy - Kohlberg's theory - Gilligan's theory - consensus and controversy – Models of Professional Roles - theories about right action - Self-interest - customs and religion - uses of ethical theories.

**Unit III: Engineering as Social Experimentation**

9

Engineering as experimentation - engineers as responsible experimenters - codes of ethics - a balanced outlook on law - the challenger case study, similarities and contrast of engineering with standard experiments.

**Unit IV: Engineer's Responsibility for Safety**

9

Safety and risk - assessment of safety and risk - risk benefit analysis and reducing risk - the three mile island and Chernobyl case studies. Collegiality and loyalty - respect for authority - collective bargaining - confidentiality - conflicts of interest - occupational crime - professional rights - employee rights - Intellectual Property Rights (IPR) - discrimination.

**Unit V: Global Issues**

9

Multinational corporations - Environmental ethics - computer ethics - weapons development - engineers as managers-consulting engineers-engineers as expert witnesses and advisors -moral leadership-sample code of Ethics (Specific to a particular Engineering Discipline).

**Total hours: 45****Text Books**

1. Mike Martin and Roland Schinzinger, "Ethics in engineering", McGraw-Hill, New York 1996.
2. Govindarajan M, Natarajan S, Senthil Kumar V. S, " Engineering Ethics", Prentice Hall of

India, New Delhi, 2004.

3. John R Boatright, “Ethics and the Conduct of Business”, Pearson Education, New Delhi, 2003.

**Reference Books**

1. Charles D. Fleddermann, “Engineering Ethics”, Pearson Education / Prentice Hall, New Jersey, 2004 (Indian Reprint now available)
2. Charles E Harris, Michael S. Protchard and Michael J Rabins, “Engineering Ethics – Concepts and Cases”, Wadsworth Thompson Learning, United States, 2000 (Indian Reprint now available)
3. Edmund G Seebauer and Robert L Barry, “Fundamentals of Ethics for Scientists and Engineering

**Course Objectives:**

The student will choose any one Project in consultation with the Guide in their discipline. The student will carry out data collection, Literature studies and Mathematical Modeling calculations independently with the help of the guide. They have to complete the preliminary calculations and preliminary checks. Detailed design will be carried out in phase II of the project.

**Course Outcome (Employability)**

CO1: Demonstrate a thorough and systematic understanding of project contents.

CO2. Understand methodologies and professional way of documentation and communication. CO3. Know the key stages in development of the project.

CO4. Extend or use the idea in mini project for major project

CO5: To develop effective communication skill by delivering a seminar based on final report

### **Course Objectives:**

The student will be able to carry out detailed **design of the project in this phase** and he will have to complete the project work by the end of the semester. He will give a **seminar presentation on the calculations and drawings** carried out to the guide so that he gains more confidence in the design aspects.

### **Course Outcomes: (Employability)**

CO1: Conduct **literature survey** to locate for **materials and sources** relevant to the **selected problem area**

CO2: Understand the materials obtained and connect the **materials** with the **problem to be solved**

CO3: Define and **specify the problem** precisely

CO4: Assimilate and **apply the knowledge** learnt in generating **good solutions to the problem**;

CO5: Think critically the formulation of **alternative models and solutions to the problem**, in the analysis of approaches to the **solution** and their implementation;

CO6: Evaluate the **final outcome** in an objective manner;

# **PROFESSIONAL ELECTIVE COURSES**

**Course Objectives:** To provide awareness to Petroleum Refining and Petrochemicals. To enable the students to learn various topics related to distillation, estimation of vapour liquid equilibria, types of distillation equipments and design of distillation columns. Students are expected to have sound knowledge on manufacturing process of petrochemicals.

**COURSE OUTCOMES (Employability):**

CO1: Identify properties of crude oils and products

CO2: Analyze different types of crude oils

CO3: Understand primary processes

CO4: Understand secondary processes

CO5: Examine suitable technologies to be used in Refinery & Petrochemical processes

**UNIT I: Introduction**

9

Origin, exploration and production of Petroleum, Types of crudes, composition, characteristics, Products Pattern, Indigenous and imported crudes. Crude heating, primary distillation principles, separation of cuts, gaps / overlaps, stripping. Desalting heat balance in distillation, energy input and recovery, vacuum distillation, types of trays, drawoffs, intermediate product, quality control.

**UNIT II: Processing**

9

Lube oil and wax processing, solvent extraction, dewaxing, desilting, deasphalting, clay contacting, principles operating parameters, feed and product equalities and yields. Types and functions of secondary processing, cracking, thermal cracking and visbreaking, different feed stocks, products, yields and qualities.

**UNIT III: Synthesis**

9

Fluid catalytic feed stocks and product yields and qualities. Catalyst and operating parameters. Steam Reforming, Hydrogen, Synthesis gas, cracking of gaseous and liquid feed stocks, olefins, Diolofins, Acetylene and Aromatics and their separation.

**UNIT IV: Unit Processes**

9

Alkylation-alkylation reactions, process variables, alkylation feedstocks, alkylation products, catalysts, Oxidation, Dehydrogenation, Nitration, Chlorination, Sulphonation and Isomerisation.

**Unit V: Polymerisation**

9

Monomers, polymers and copolymers, classification of polymers, plastics, condensation polymerization, Models and Techniques, production of polyethylene, PVC, Polypropylene, SAN, ABS, SBR, Polyacrylonitrile, Polycarbonates, Polyurethanes, Nylon, PET.

**Total hours: 45**

**TEXT BOOKS**

1. B.K. BhaskaraRao, "Modern Petroleum Refining Processes", Oxford and IBH Publishing Company Pvt. Ltd., New Delhi, 3<sup>rd</sup> edition, 2008.

2. Groggins, "Unit Processing in Organic Synthesis", Tata McGraw Hill, Edition 5, 1987.

**REFERENCE BOOKS**

1. Nelson W.L., "Petroleum Refinery Engineering", McGraw Hill Publishing Company Limited, 1985
2. Watkins, R.N., "Petroleum Refinery Distillation, second edition, Gulf Publishing Company, Texas 1981

**Course Objectives:** The main of learning this subject is that student will be able to understand the basics of Natural Gas engineering techniques. The objective of studying this subject is that student will be understanding the basic concept and applications of Natural Gas Engineering.

**COURSE OUTCOMES: (Employability)**

CO1: Understand the properties of natural gas.

CO2: Apply different measures in the recognition of reservoir performance.

CO3: Understand and apply flow behaviour of gas in production tubing

CO4: Conversant with different methods of processing of gas

CO5: Understand and apply gas compression fundamentals

**UNIT I Natural Gas**

9

Natural gas technology and earth science: Branches of petroleum Industry. Sources of Information for natural gas engineering and its applications. Geology and earth sciences: Earth sciences- Historical geology, Sedimentation process, Petroleum reservoirs, Origin of petroleum. Earth temperatures & pressure, Earth temperatures, Earth pressure. Petroleum: Natural gas, LP gas, Condensate, & Crude oil.

**UNIT II Properties of natural gas**

9

Properties of Natural Gases: typical compositions. Equations of state: general cubic equations, specific high accuracy equations. Use of equation of state to find residual energy properties, gas measurement gas hydrates, condensate stabilization, acid gas treating, gas dehydrations, compressors, process control deliverability test, gathering and transmission, and natural gas liquefaction.

**UNIT III Gas compression**

9

Gas Compression: Positive displacement and centrifugal compressors; fans. Calculation of poser requirements. Compressible Flow in Pipes: Fundamental equations of flow: continuity, momentum, elegy equations.

**UNIT IV Flow analysis**

9

Isothermal flow in pipes: the Weymouth equation. Static and flowing bottom-hole pressures in wells. Fundamentals of Gas flow in porous media: Steady state flow equations. Definition of pseudo-pressure function. Gas flow in cylindrical reservoirs: general equation for radial flow of gases in symmetrical homogeneous reservoirs.

**UNIT V Analysis**

9

Non-dimensional forms of the equation; derivation of coefficients relation dimensionless to real variables. Infinite reservoir solution: Pseudo-steady-state solution. Gas Well Deliverability Tests: Flow-after-flow tests: prediction of IPR curve and AOF for the well. Isochronal tests. Draw down tests: need for data at two flow rates.

**Total hours: 45**

## **TEXT BOOKS**

1. Xiuli Wang, Michael Economides, “Advanced Natural Gas Engineering”, 1<sup>st</sup> edition, 2006.
2. Katz D.L.et al., “Natural Gas Engineering” (Production & storage), McGraw-Hill, Singapore, 3<sup>rd</sup> edition, 2007.

## **REFERENCE BOOKS**

1. Oilfield Processing: Crude Oil (Oilfield Processing of Petroleum R. Solvay, Pennwell Books 1995.
2. Standard Handbook of Petroleum and Natural Gas Engineering, William C Lyons, Gary C Plisga. Gulf Professional Publishing, 2<sup>nd</sup> Edition, 2004

**Course Objectives:** The objective of this course is to introduce students to basic reservoir rock and fluid properties. To impart knowledge about various types of rocks with emphasis on the properties and Formation of reservoir rocks and the nature, characteristics and properties of fluids in the reservoir rocks.

**COURSE OUTCOMES (Employability):**

CO1: Understands rock deformation, explain the properties of fluid.

CO2. Realization of internal and external processes responsible for the dynamics of earth.

CO3. Analyze the phenomenon of presence of multiphase flow system in porous media equations for the calculation of parameters.

CO4. Determine different drive mechanisms and factors for primary recovery.

CO5: Evaluate fluid properties using PVT Analysis.

**Unit I: Introduction**

9

Composition and interior of the earth. Minerals and types of rocks – igneous, sedimentary and metamorphic rocks. Formation, structure and textures of igneous and metamorphic rocks. Plate tectonics.

**Unit II: Sedimentary Rocks**

9

Sedimentary rocks: Formation and types. Sandstone, siltstone, shale, conglomerates. Carbonate rocks – limestone, dolomite. Structure & Texture of sedimentary rocks.

**Unit III: Property of Rocks**

9

Properties of sedimentary rocks – colour, size, shape, porosity, permeability and their relationship. Electrical, resistivity and atomic properties. Effect of stress and strain, diagenesis, catogenesis, metagenesis. Heterogeneity– vertical and colour. Clay minerals and their formation and properties

**Unit IV: Reservoir fluids**

9

Reservoir fluids – oil, gas and water and their relationship. Capillary pressure and its determination, fluid saturation, surface tension, pore size distribution. Wettability, evaluation and alternation of wettability and effect of fluids on rock properties.

**Unit V: Fluids Flow Property**

9

Flow types, flow regimes, Darcy's law, linear flow, Poiseville's law, flow system, multiple permeability. Fluid properties – Phase behavior of hydrocarbon system. Fluid – rock interface and interaction. Fluid characteristics, PVT analysis. Flash liberation and differential liberation.

**Total hours: 45**

**TEXT BOOKS**

1. F.J.Peltijohn, "Sedimentary rocks", 1<sup>st</sup> edition, 1998
2. Terek Ahmed, "Reservoir Engineering Hand book", 3<sup>rd</sup> edition, 2001

### **REFERENCE BOOKS**

1. Craft, B.C. and Hawkins, M.F, "Applied Petroleum Reservoir engineering", 4<sup>th</sup> edition, 2003.
2. Amyx. J.W, Bass D.M and whiting R.L "Petroleum Reservoir Engineering", 1<sup>st</sup> edition, 1998.

**Course Objectives:** Objective and scope of pipeline engineering is to understand the process of fluid transportation with special reference to crude oil/gas/refined products, its construction and maintenance, economics of Pipeline transportation.

**COURSE OUTCOMES: (Employability)**

CO1: Apply the knowledge of Mathematics, Science, and Engineering in **property calculations**

CO2: Evaluate the **Pressure Drop in Oil and Gas Pipelines.**

CO3: Analyze the **various techniques** used in **pipeline laying and construction.**

CO4: Classify different **machinery** used for **transporting oil and gas.**

CO5: Examine **Pipeline issues and mitigation measures.**

**UNIT I Design of Pipeline**

**9**

Factors influencing oil, gas and refined products as **pipeline design**; Hydraulic surge and water hammer; specific heat of liquids; river crossing; **pipe size and station spacing** etc, **load constructions, performance analysis and design**

**UNIT II Fluid Flow**

**9**

Theory and different formulae of the flow of fluids in oil/gas pipelines; basic equations for the flow of fluids through pipes; different flow equations for laminar and turbulent flow of compressible and incompressible fluids (Newtonian); Introduction to the flow of Non-Newtonian fluids through pipes; **multiphase flow and loop pipelines.**

**UNIT III Construction and Maintenance of pipelines**

**9**

**Route location survey, materials; project specifications**; general equipment specifications (Pipes, valves and fittings); **Installation of expansion loops** and thermodynamic tapping plant. Pigging, **Pigging Technology**: pig launcher and receiver, intelligent pigging, types of pigs.

**UNIT IV Offshore Pipeline**

**9**

Design and control of Sag and Over bend; Description of stinger; and Riser, articulated stinger, **construction of offshore pipeline, Method of underwater welding, offshore construction,**

**UNIT V Hydrates, Wax & Scale**

**9**

**Formation and prevention of hydrates**, wax and scale, Crude conditioning and use of **additives to improve flow conditions**, inhibition and remediation of hydrates, scale, paraffin of wax, strategies for controlling the solids.

**Total Hours: 45**

**TEXT BOOKS**

1. Andrew C. Palme, Roger A. King, "Subsea Pipeline Engineering", 2nd Edition, Pennwell corporation, 2008

2. BoyunGuo, Shanhong Song, Ali Ghalambor, and Tian Ran Lin, Offshore Pipelines, 2<sup>nd</sup> edition, Elsevier, 2014.

## REFERENCE BOOKS

1. [George A. Antaki](#), "Piping and Pipeline Engineering: Design, Construction, Maintenance, Integrity, and Repair", CRC Press, 2003.
2. M. Mohitpour, H. Golshan, A. Murray, "Pipeline Design and Construction: A Practical Approach, 3<sup>rd</sup> edition, 2007.

**Course Objectives:** To understand the basics of Design and Completion techniques of a well. The objective of studying this subject is that student will be able to design and complete the Well Operation during the hydrocarbon Explorations.

**COURSE OUTCOMES: (Employability)**

CO1: Understand basic components of drilling engineering for well planning and design

CO2: Design the well using different parameters

CO3. Understand well control methods and signatures of well in stability

CO4. Know and apply codes for well design

CO5. Understand rig hydraulics

**UNIT I: Introduction**

9

Prediction of formation of pore pressure, Causes of abnormal pressure, Abnormal pressure evaluation, Formation integrity test, Fracture gradient determination, geomechanical evaluation, well issues.

**UNIT II: Casing properties**

9

Casing properties: functions of casing, Casing properties, Casing specifications, Casing connections, Casing Design principles: Data collection, Factors of influencing casing design, design criteria, Cementing, Drilling Fluids.

**UNIT III: Drill bits**

9

Drill Bits: Bit selection guide lines, IADC Bit classification for Roller cone Bits, PDC Bits, Diamond and TSP Bits, Drilling cost calculation, Drill String Design: Drill pipe selection, BHA selection, Drill string design criteria, Directional Drilling.

**UNIT IV: Types of wells**

9

Horizontal and Multi lateral wells: Horizontal wells, Extended Reach wells, Multi lateral wells, Multi lateral well planning consideration, HPHT wells, well costing.

**UNIT V: Well completion**

9

Well Completion: Definition of Well Completion, Types of completion, Open Hole or Barefoot Completions, Perforated Completions, Naturally Flowing Completions, Artificial Lift Completions, Artificial Lift Methods, Single Zone Completion, Multiple Zone Completions, Phases of Well Completion, completion selection and design criteria.

**Total hours: 45**

**TEXT BOOKS**

1. Chaudhry Amanat U, "Oil Well Testing Handbook" Gulf Professional Publishing, 2004.
2. Earlougher, R.C., "Advances in Well Test Analysis", Monograph Series, SPE, 1977.

**REFERENCE BOOKS**

1. Devereux, S., "Practical Well Planning and Drilling", PennWell Corporation, 1998.
2. Lee W. J, "Well Testing", Textbook Series, SPE, Richardson, TX, USA, 1982

**Course Objectives:** This course provides a technical overview of the phases, operations, and terminology used in the drilling and completion of an offshore oil or gas well. The course will also provide students with a better understanding of the issues faced in all aspects of drilling operations, with a particular focus on the unique aspects of offshore operations.

**COURSE OUTCOMES: (Employability)**

CO1: Explain the offshore sea environment and its challenges, the stability and station keeping mechanism of offshore structures

CO2: Explain applications and limitations of the various fixed and floating offshore drilling/production structures

CO3: Distinguish between the offshore and onshore field development processes

CO4: Understand various production methods used in offshore rigs

CO5: Understand the design calculations in offshore structures

**Unit-I: Physical Environment**

9

Overview of physical ocean environment, geotechnical aspect –sea floor marine soils, composition and properties of sea water, seawater corrosion, offshore rigs, floating drilling vessels, comparison, fixed offshore structures, wind, wave, current and other forces acting on offshore structures, principle motions, metacenter, stability calculations, ballast control, Rov's.

**Unit-II: Field Operations**

9

Station keeping, conventional mooring system, spread mooring system, design considerations, operations, equipment and functions, Dynamic positioning system, components, working. Deepwater drilling operations, riser system, components, riser tensioners, heave compensator, operations, emergency disconnect and hang off. Floater well control, shut in procedures, well kill operations, subsea well head, BOP stack

**Unit-III: Deepwater Drilling**

9

Deepwater well construction problems and solutions, deepwater cementation, high temp. High pressure wells, construction, casing and mud policy. Drilling logs, gas hydrate problems. Wellbore stability and rock mechanics, Mohr's coulomb criteria 2D-3D system, insitu stress, poissions ratio, mud window for vertical, horizontal deep water drilling. Case studies.

**Unit-IV Development and Production**

9

Risers for Production operations, deepwater completion, Subsea completion, planning, tree selection, design considerations of offshore platform, production and processing of oil and gas, separators, design and planning to stage separation, selection, specification and operations, production monitoring and control system. Multilayer producing fields, EOR, offshore field development considerations in deepwater.

**Unit-V: Handling and Transportation**

9

Offshore storage, handling and transportation of oil and gas tankers, vessels and buoys. Structural considerations functions and operations. Loading conditions, selection specification and operational aspect. Advantages and disadvantages. Sub-sea oil and gas lines – Design, construction, installation (laying methods), J-tube installation, and pressure drop calculations for two phase flow including riser behavior. Economics and logistic considerations in exploring, drilling, production,

transport and reservoir management. Offshore support vessels, their roles, types, capabilities including fire fighting, pollution control, Different types of barges and their operations. Offshore vessel mounted cranes.

**Total hours: 45**

### **TEXT BOOKS**

1. R. Stewart Hall, "Drilling and producing offshore", Pennwell books, 1<sup>st</sup> edition, 1983.
2. BencGerwickJr, "Construction of Marine and offshore structures", IDT ONGC Dehradun, drilling operations manual.

### **REFERENCE BOOKS**

1. Chakraborty S.K, "Handbook of offshore engineering volume I and II", Elsevier, 2006. Exxon Mobil, "Floating Drilling School, Deepwater", 5<sup>th</sup> edition, 2002
2. Total Fina Elf, "Deepwater reference book", 4<sup>th</sup> edition, 2000

**Course Objectives:** To impart knowledge to the students on the basic concept of reservoir engineering, characteristics of crude oil and gas, rock properties, characteristics of reservoir fluids, flow through porous media and various measurements and measuring systems.

**COURSE OUTCOMES (Employability):**

CO1. Identify the nature of Hydrocarbon Reservoir and its affective exploitation - using computer technology through application geoscientific principles.

CO2. Will be able to facilitate effective estimations of Hydrocarbons together with a high degree of confidence using the effective maps and statistical procedure.

CO3. Understand the Risk analysis and its correlations with Resource Managements .

CO4. Will be able to contribute development of software and application of existing software in the arena of Reservoir Engineering.

CO5: Understand the measuring system used in reservoir Engineering.

**UNIT I Introduction**

9

Introduction to reservoir engineering, characteristics of crude oil and natural gas, classification of crude and its physicochemical properties, calculation of hydrocarbon volumes, fluid pressure regimes, volumetric gas reservoir engineering.

**UNIT II Reservoir Rock Properties**

9

Porosity and permeability determination, combination of permeability in parallel & series beds, porosity permeability relationship, fluid saturation determination and significance, effective and relative permeability, wettability, capillary pressure characteristics, measurements and uses. Coring and Core Analysis

**UNIT III Reservoir Fluids**

9

Phase behavior of hydrocarbon system, ideal & non ideal system, equilibrium ratios, reservoir fluid sampling, PVT properties determination, different correlations and laboratory measurements, data reduction, evaluation and application.

**UNIT IV Flow of Fluids through Porous Media**

9

Darcy's law, single and multiphase flow, linear, radial & spherical flow, steady state & unsteady state flow, GOR, WOR equations, derivation of the basic radial flow equation, condition of solution.

**UNIT V Measuring system**

9

Reservoir Pressure Measurements and Significance- Techniques of pressure measurement.

Reservoir Drives: Reservoir drive mechanics and recovery factors. Reserve estimation: resource & reserve concept.

**Total hours: 45**

**TEXT BOOKS**

1. Tarek Ahmed ,”Reservoir engineering hand book”, 3<sup>rd</sup> edition, Gulf publishing house, 2006.
2. Guo, B, Lyons, W.C. and Ghalambor, A., Petroleum production engineering: a computer assisted approach, Gulf Professional Publishing, Burlington, 3<sup>rd</sup> edition, 2006.

**REFERENCE BOOKS**

1. Tarek Ahmed, Paul D Mc Kinney, “Advanced reservoir engineering” Gulf publishing house, 2<sup>nd</sup> edition, 2005.
2. Abdus Satar, James L Butchwater, “Practical enhanced reservoir engineering” Penwell corporation, 2<sup>nd</sup> edition, 2007.

**Course Objectives:** The course provides a comprehensive and up-to-date assessment of upstream petroleum economics, and an introduction to economics analysis of global warming, the potential roles of government and implications for energy markets.

### COURSE OUTCOMES:(Employability)

CO1: Describe the different types of **energy resources** (conventional, unconventional, renewable & fossil)

CO2: **Interpret** the evolution of the **factors affecting** the energy **supply and demand** (crude prices, technology, reserves, geopolitics, geography, environment, etc.)

CO3: Identify the factors of the **energy scene and** their **strategic guidelines**.

CO4: Describe the main **steps of** the **upstream** sector.

CO5: Distinguish the different types of **oil contracts** and explain the main **economic criteria to evaluate a project**.

### Unit I: Introduction to Petroleum Economics 9

**Supply and demand** Curve **Analysis, Types** and utility in production forecast, Reserves to Production Ratio, Statistical analysis, Hubert curves. Reserves **auditing**, standard practices for reporting of reserves. SEC/ SPE/WPC **norms**.

### Unit II Oil Supply and Demand Curves and Price Determination 9

**Crude oil** characteristics, **Marketing and trading** of crude oil, Crude oil pricing **mechanism** and oil price **elasticity**, Inflation and **effects on oil pricing**. Factors controlling oil and gas pricing. Oil differential and influence on price of oil.

### Unit III: Pricing and competition 9

**Time value of money**, types of costs, **Economic Yardsticks**: Return on Investment, Payout Period, Net Present Value, Discounted Cash Flow, DCFROR, Incremental Analysis, Replacement Analysis, Sensitivity analysis, Optimization. **Ranking of projects** based **on economic parameters**.

### Unit IV: Empirical Methods in Energy Economics 9

Definition, **Exploration and Production Probabilistic Analysis**, Risk Analysis, Management and Economic Assessment, Bidding processes, **NELP** and Production sharing contracts, Decision Analysis, Preference Theory, Real Option Theory, Stochastic Modelling.

### Unit V: Issues in Petroleum Economics 9

**Petroleum** Industry **Accounting and types**, Petroleum Auditing, Tax Analysis, Cost, Expenditure and revenues under different heads and their proportion in Asset. Depreciation, Depletion, Amortization **Methods** and their **use in tax calculations**. E and P Business in world and India, Historical development, **Role of OPEC** and non OPEC **countries**. Reasons for development of a **fiscal system** for petroleum industry. Classification of Petroleum Fiscal Systems.

**TEXT BOOKS**

1. Abdel A. A., Bakr A. B, and Al Sahlawi M. A., “Petroleum Economics and Engineering”, Decker Publications, 1992.
2. Johnston, D, “International Exploration Economics, Risk, and Contract Analysis”, Penwell Books, 2003.
3. “IFP, Oil and Gas Exploration and Production, Reserves, Costs and Contracts”, Technical Publication 2007.

**REFERENCE BOOKS**

1. Mian M A, Project Economics and Decision Analysis, Penwell-publications, Volume I and II, 2002.
2. Seba R. D., “Economics of Worldwide Petroleum Production”, OGCL-Publications, USA, 1998.

**Course Objectives:** To learn design aspect of well drilling equipments. To understand horizontal, multilateral drilling techniques. To know about wellbore stability and completions. To understand recent developments in drilling technologies

**UNIT I****9**

**Derrick** and block tackle **system types**, **design considerations** ton mile and cutoff practices off drilling line, derrick design considerations.

**UNIT II****9**

Casing buckling – Neutral point, axial, radial and tangential stresses and calculations. Corrosion mechanism, casing wear, **drill sting operations** in H<sub>2</sub>S environment.

**UNIT III****9**

**Cement rheology**, gas well cementation, **drilling logs**- temp, CBL, VDL, casing inspection logs, USIP (ultrasonic image tester), IBC (image behind casing), radio active tracer survey, stuck pipe, **mud logs**, LWD, DST, MWD.

**UNIT IV****9**

Well bore stability / **rock mechanics** – Mohrs coulomb criteria 2D- 3D system, insitu stress. Chemo-poro- thermo- plastic behaviour, pore pressure and Biot's constant, stress around vertical well bore, failure of inclined well bore, Mud window for vertical, horizontal wells, **wellbore instability** types and causes, **hydro fracturing**.

**UNIT V****9**

Introduction to horizontal and multilateral drilling, MPD, UBD, CTD, deepwater drilling operations. **Construction, planning and design aspect**. Horizontal well completion, completion **sting design** vertical and horizontal wells.

**Total hours: 45****COURSE OUTCOMES:**

- CO1: Understand **drill string mechanics**: loads, cause of failure, design concepts  
 CO2: Evaluate **drilling problems**: stuck pipe situations, fishing operations.  
 CO3: Identify **advanced drilling technologies** - casing drilling, HPHT, coiled tubing drilling  
 CO4: Proper **selection of drilling technology** for shale gas, geothermal drilling, etc.  
 CO5: Distinguish Non-conventional **drilling methods and equipment** including **environmental aspects** of drilling activities

**REFERENCE BOOKS:**

- 1) Bourgoyne A.T, Millheim K K, Chenevert M E and Young F S; Applied Drilling Engineering, SPE textbook series. 1991, 508 pp.
- 2) Carden, R S, Horizontal and Directional Drilling, Petroskills, OGCI, 2007, 409 pp.
- 3) Mitchell R F, ( Editor), Drilling Engineering, Petroleum Engineering handbook, Volume II, 2007, 770 pp.

4) Lyons w, Working Guide to Drilling Equipment and Operations, Gulf Professional Publishing, 2010, 617 pp.

**Course Objectives:** To give comprehensive view of unconventional oil and gas resources and their exploration. Also to understand the place of oil and gas in the domestic and international energy landscape and debate the future of oil and natural gas in the world economy.

**COURSE OUTCOMES (Employability):**

CO1: Introducing students to newer hydrocarbon resources including shale gas, coal bed methane, gas hydrates heavy oil and oil shale. They understand and evaluate between conventional and unconventional hydrocarbon resources.

CO2: Evaluate origin, occurrence, development and production of heavy oil.

CO3: Understand exploration, production and development of shale gas.

CO4: Analyze production and development of non-conventional gas

CO5: Familiarize with origin, occurrence and production of gas hydrates.

**UNIT I: Overview of Hydrocarbon Resources**

9

Definition of unconventional hydrocarbons – shale gas, coal bed methane, gas hydrates, heavy oil, oil shales, difference between conventional and unconventional resources, carbonate fracture.

**UNIT II: Heavy Oil**

9

Heavy oil – origin, properties, characteristics, types, generation, occurrence, geology, exploration and evaluation, development and production of unconventional oil, thermal and non thermal recovery methods.

**UNIT III: Shale Reservoirs (Gas and Oil)**

9

Shale gas, basin centered gas and coal bed methane – origin, origin, properties, characteristics, types, generation occurrence and geology, evaluation and exploration, techniques for shale gas development

**UNIT IV: Production and Development**

9

Production and development of non-conventional gas, Design for Hydro fracturing and cracking, well operation, production equipments, water disposal, Horizontal wells. Techniques associated with production and development

**UNIT V: Gas hydrates**

9

Gas hydrates – origin and occurrence. Drilling and completion of wells, gas extraction from gas hydrates. Environmental consideration of unconventional of oil and gas. Economics of development.

**Total hours: 45**

## **TEXT BOOKS**

1. Carrol John, "Natural gas hydrates: A guide for engineers", Gulf Publications, 4<sup>th</sup> edition, 2003.
2. Smith J.M, "Chemical Engineering Kinetics", McGrawHill, 5<sup>th</sup> edition, 2002

## **REFERENCE BOOKS**

1. Warner HR, "Emerging and Peripheral Technologies in Petroleum Engineering", volvi, 6<sup>th</sup> edition, 2007.
2. Fogler H.S., "Elements of Chemical Reaction Engineering", Prentice Hall of India, 3<sup>rd</sup> edition, 1998.
3. Farooai Ali Jones S A, Ansmeldau RF, "Practical heavy oil recovery", 2<sup>nd</sup> edition, 1997.

**Course Objectives:** The objective of this course is for students to highlight the importance of chemistry in Oil field & well treatments. Oil, gas and water supply wells are damaged during their life time. Various types of damage can occur during drilling, completion and production.

### **COURSE OUTCOMES (Employability):**

CO I: Understanding the role of speciality of chemicals and additives used in the oil field industry.

CO II: Explaining the properties and application of a range of chemicals used in corrosion control for oil and gas production.

CO III: Understanding of and ability to evaluate the mechanisms of the various forms of corrosion.

CO IV: Understanding the role of the properties of a range of chemicals used in oil and gas production and their impact on corrosion.

CO V: Discussing Polymers and additives for various forms of corrosion and testing methods

### **UNIT-I Introduction**

9

Role of specialty of production chemicals- Functions, selection and types of drilling mud- Classifications and compositions of drilling mud- Dispersed non-inhibited systems- Chemicals: additives, thickener- Drilling fluid disposal, characterization of drilling fluids- Fluid loss additives- Clay stabilization: types and swelling impedes- Mechanisms causing instability, inhibitors of swelling- Chemicals in detail

### **UNIT-II Oilfield Metallurgy**

9

Dispersant: low molecular weight dispersant, synthetic, alternative and co-polymers- Natural modified polymers, dispersant for "S"- Reservoir: Bacteria control, mechanisms of growth, Detection of bacteria, mathematical model- Treatments with biocides, non biocide control- Various biocides- Bacterial corrosion- Water shutoff

### **UNIT- III Corrosion in the Oil Field**

9

Production :Corrosion inhibitors: classification and fields of application- Scale removal treatment , application techniques, amides- Nitrogen based- Poly amine derivatives- Imidazoline corrosion inhibitor, azoles- Carbonyl compounds- Scale inhibitors- Gelling agents

### **UNIT – IV Oil Field Chemicals**

9

Oil spill- Chemicals in detail- EOR- Polymers- Chemicals in detail- Hydraulic fracturing fluids, Types and characterization- Oil based system- Foam based system, clay stabilization, fluid loss additives, drilling muds, bit lubricants, bacteria control, corrosion inhibitors, scale inhibitors, gelling agents.

## **UNIT- V Polymer Material**

9

Introduction Polymers and Additives for Cements Corrosion, Asset Integrity Management and Monitoring Standards and Testing. **Nanomaterials and Nano-composites**, Elastomers and Thermosets for downhole applications Pipes.

**Total hours: 45**

### **TEXT BOOKS**

1. J.K. Borchardt and T.F.Yen, "Oil-Field Chemistry, Enhanced Recovery and Production Stimulation", 1<sup>st</sup> edition, 1988
2. J. I. DiStasio, "Chemicals for Oil Field Operations", 1<sup>st</sup> edition, 1981

### **REFERENCE BOOKS**

1. L.J. Zitha, "Well Treatments and Water Shut-off by Polymer Gels", 2000.
2. L.L. Schramm, "Surfactants Fundamentals and Applications in the Oil Industry"- 2000.

**Course Objectives:** This course is designed to cover all aspects of well stimulation and its importance in increasing productivity of wells beside it discusses acidizing and fracturing quality control, conducting the treatment, monitoring pressures, and other critical parameters, during and after the treatment.

COURSE OUTCOMES: **(Employability)**

CO1: Recognise the concept of **well completion** and **workover** job for a wellbore.

CO2: Demonstrate well completion, **well services** and equipments to improve production performance of a wellbore.

CO3. Acquaint with types of well completion.

CO4. Recognise and apply application of techniques to solve well productivity related problems.

CO5. Understand and apply problems related to well.

#### **UNIT I: Introduction**

**9**

Introduction – importance of stimulation and work over techniques. Problems likely to be encountered – fishing, hole conditioning, sand encroachment, water and gas coning, pressure depletion, limited production rates, formation damage, wax deposition.

#### **UNIT II: Well Problem Analysis**

**9**

Well problem analysis: Formation damage – selection of mud parameters, hole conditioning methods, bore hole environment, loss circulation, removal of mud cake, fishing – tools and methods.

#### **UNIT III: Fracture - Stimulation**

**9**

Perforation job, squeeze cementing techniques, water and gas shut-off jobs, selection **workover-planning** rig selection criteria, workover fluids, circulation techniques, tubing retrieval, workover for low permeability well, partially pressure – **depleted wells**, reduction of water production, reduction of gas production in oil wells, zone transfers.

#### **UNIT IV: Sand Production & Measurement**

**9**

**Sand control** – reasons for sand production, effects of sand production, control methods-**gravel packing** screen selection, gravel selection placement techniques.

#### **UNIT V: Acidizing and Acid Fracturing**

**9**

Acidizing concept, types of acids and additives, Carbonate and elastic reservoirs. **Hydraulic fracturing** – designing of frac job, frac fluids, **proppants** and additions and their selection, post frac job evaluation.

### **TEXT BOOKS**

1. Earlougher, R.C., “Advances in Well Test Analysis”, Monograph Series, SPE, 1977.
2. Michael J. Economides, Larry T. Watters, Shari – Donn “Petroleum Well Construction” –Norman-2001.

### **REFERENCE BOOKS**

1. “Petroleum Production Engineering” – BoyunGuo, William C. Lyons & Ali Ghalambas Elsevier Science & Technology books.
2. Chaudhry Amanat U, “Oil Well Testing Handbook” Gulf Professional Publishing, 2004, 699 pp.
3. Devereux, S., “Practical Well Planning and Drilling”, PennWell Corporation, 1998.

**Course Objectives:** To impart knowledge on different oil/gas field evaluations in order to maximize the production and improvement of facilities. Students will be able to understand the different evaluation methods of oil/gas fields and reserves.

**COURSE OUTCOMES (Employability):**

CO1: Analyse and interpret data collected from different sources

CO2: Develop reservoir model using upscaling of available data

CO3: Run basic simulation model using iterations

CO4: Predict the future performance of production of hydrocarbons.

CO5: Apply suitable methods for increase in reservoir efficiency.

**UNIT I**

9

Geological studies: – Structural contour maps and various geological models. Estimation of reserves. Hydrodynamic Study, Techno-economic Evaluation for normal and marginal fields. Innovative ways to asset development.

**UNIT II**

9

Petroleum project evaluation-mineral project evaluation case studies. The design and evaluation of well drilling systems-Economic appraisal methods for oil field developmental project evaluation including risk analysis, probability and statistics in decision-making and evaluations. case studies.

**UNIT III**

9

An integrated reservoir description in petroleum engineering-usage of geophysical, geological, petrophysical and engineering data-emphasis on reservoir and well data analysis and interpretation, reservoir modeling (simulation), reservoir management (production optimization of oil and gas fields) and economic analysis (property evaluation)

**UNIT IV**

9

An integrated reservoir development in petroleum engineering-reservoir and well evaluation production optimization-nodal analysis, stimulation, artificial lift facilities-surveillance.

**UNIT V**

9

Evaluation of well completions-placement of casing, liners and well tubing. Evaluation, performance of horizontal wells. Evaluation of acidization treatments.

**Total hours: 45**

**TEXT BOOKS:**

1. Katz D.L.et al., Natural Gas Engineering (Production & storage), McGraw-Hill, Singapore.

2. Standard Handbook of Petroleum and Natural Gas Engineering. 2nd Edition. William C Lyons, Gary C Plisga. Gulf Professional Publishing.
3. Mc.Cray. A.W and Cole.F.W. 'Oil Well Drilling Technology' University of Oklahoma Press, Norman 1959.

**Course Objectives:** To study and analyze suitable equipment for particular reservoir conditions. Students will be able to understand the concept of designing Equipments for Petroleum Exploration

### **COURSE OUTCOMES: (Employability)**

CO1: Recognize and understand the different components of the drilling system.

CO2: Analyse the different flow pattern used in petroleum production system

CO3: Understand and compare the rig data to calculate various problems

CO4: Compare and relate the different treatment processes used in petroleum production system.

CO5: Interpret the storage system patterns and transportation facilities used in petroleum production system.

#### **UNIT I**

9

Casing program, casing and tubing design, principles of cementing, completion added skin, well perforating, hydraulic fracturing. DRILL BIT DESIGN.ROLLER CONE BITS.PDC DRILL BITS.NOMENCLATURE AND IADC CODES for drill bits. BHA (Bottom hole assembly). ESP (Electrical submersible pumps). SRP (Sucker rod pumping) unit design.

#### **UNIT II**

9

Design of Surface Facilities -Design of production and processing equipment, including separation problems, treating, and transmission systems.

#### **UNIT III**

9

Capstone design Student teams apply knowledge in the areas of geology, reservoir engineering, production, drilling and well completions to practical design problems based on real field data with all of the associated shortcomings and uncertainties. Use of commercial software.

#### **UNIT IV**

9

Oil desalting-horizontal and spherical electrical dehydrators- Natural Gas Dehydration-Horton sphere- Natural Gas Sweetening. Crude & Condensate Stabilization-design of stabilizer- Oil and Gas Treatment. Treating Equipment.

#### **UNIT V**

9

Refinery Equipment Design-atmospheric distillation column Design and construction of on/offshore pipelines, Fields Problems in pipeline, Hydrates, scaling & wax etc and their mitigation..

**Total hours: 45**

#### **TEXT BOOKS:**

1. Petroleum Exploration Hand Book by Moody, G.B.
2. Wellsite Geological Techniques for petroleum Exploration by Sahay.B et al

#### **REFERENCE:**

1. Standard Hand Book of Petroleum & Natural Gas Engineering” – 2<sup>nd</sup> Edition 2005-  
William C.Lyons& Gary J.Plisga-Gulf professional publishing comp (Elsevier).

**Course Objectives:** To impart knowledge to the students on the importance of surveying, classification, principles of surveying, linear and angular measurement techniques, various types of instruments used for surveying and the panel table survey method.

**COURSE OUTCOMES: (Employability)**

CO1: Calculate angles, distances and levels

CO2: Identify data collection methods and prepare field notes

CO3: Understand the working principles of survey instruments

CO4: Estimate measurement errors and apply corrections

CO5: Interpret survey data and compute areas and volumes

**UNIT I Introduction to Surveying**

**9**

Objective of surveying and its importance, Classification, principles of surveying, Application of Surveying in various fields of Engineering, trigonometric levelling, determination of coefficient of refraction.

**UNIT II Linear measurements**

**9**

Conventional Instruments for measuring distances, ranging and chaining out of survey lines, Obstacle in chaining and errors in chaining, corrections-Principles, offsets, booking field notes, problems. Linear measurements (EDMs): Theory and characteristics of electromagnetic waves, radio waves, infra-red, laser waves, principle of distance measurement with EDMs.

**UNIT III Angular measurements**

**9**

Principle and construction of prismatic compass, bearing of lines, local attraction, magnetic declination and examples. Theodolite: The essentials of transit theodolite, definition and terms, temporary adjustments, measurement of horizontal and vertical angles, different operations and sources of error, theodolite traversing, Omitted Measurements.

**UNIT IV Levelling instruments**

**9**

Definition, different type of levelling instruments, curvatures and refraction corrections, reciprocal levelling, errors in levelling and problem solving, axial signal correction, difference of elevation

**UNIT V Plane Table Surveying**

**9**

General, Methods, Intersection, Traversing, Resection, two point problem and three points problem etc. Contouring: General, Contour Interval, Characteristics, Methods of locating contours, Interpolation etc.

**Total hours: 45**

**TEXT BOOKS**

1. R.P. Loweth, "Manual of Offshore Surveying for Geoscientists and Engineers" Springer, 1997

2. Paul R Pinet, Invitation to oceanography, 6<sup>th</sup> edition, Content technologies

#### **REFERENCE BOOKS**

1. W. Schofield, "Engineering Survey", 5<sup>th</sup> edition, Elsevier-2001.
2. B. C. Punima, "Surveying", Firewall media, volume 1, 6<sup>th</sup> edition, 2005.

**Course Objectives:** To impart knowledge to the students on the work calculation of ideal and non ideal gases, horse power, thermodynamics of gases and liquid hydrocarbons, phase rule of single, two, three multi- component and multi-phase systems.

**COURSE OUTCOMES: (Employability)**

CO1: Apply the knowledge of **First law of thermodynamics** to solve the problems.

CO2: Explain **various properties of fluids** like pressure, temperature and volume, influencing its behavior under various conditions of phase equilibrium

CO3: Apply the knowledge of **second and third law of thermodynamics** to solve the practical problems.

CO4: Discuss the knowledge to **Steady-Flow Process**

CO5: Classify different types of oil and gas reservoirs based on the Fundamentals of **reservoir fluid behavior and properties**

**UNIT I Work Calculations**

**9**

Work **calculation for compression / expansion of ideal and non ideal gases**, compression cycles and horse power calculations - single, double and multistage with and without clearance.

**UNIT II Thermodynamics of Gases and Liquid Hydrocarbons**

**9**

**Free energy & work function**, Mollier diagrams, perfect & imperfect gaseous mixtures, **Equation of state, Law of corresponding states**, Joule Thompson effect, Arrhenius equation and activation energy. Fugacity and fugacity coefficient of gases and gaseous mixtures, Lewis fugacity rules and Third law of thermodynamics.

**UNIT III Solution Thermodynamics**

**9**

Vapour liquid equilibria, equilibrium constant, partial molar properties, chemical potential, **Raoult's law and Henry's law**, **ideal and non ideal solutions**, Activity and activity coefficients, Gibb's Duhem equation, Gibb's adsorption equation.

**UNIT IV Phase Rule**

**9**

Phase rule of single, two, three, multi-component and multi phase systems, phase behaviour indifferent conditions, **Thermodynamic aspects of phase equilibria. Calculation** of phase equilibria, Ternary and pseudo ternary phase diagrams

**UNIT V Fluid Flow Thermodynamics**

**9**

Single phase flow & multiphase flow through vertical, incline and horizontal conduits. **Pressure traverse curves and their applications.** Venturi flow, nozzle flow, pipe internal flow, annular flow and nozzle flow thermodynamics of multiphase & multi-component system.

**Total hours: 45**

**TEXT BOOKS**

- 1 Karen Schou Pedersen, Peter L. Christensen, Jawad Azeem Shaikh, "Phase Behavior of

Petroleum Reservoir Fluids” 2<sup>nd</sup> edition, CRC Press, 1998.

2. Abbas Firoozabadi, “Thermodynamics of Hydrocarbon Reservoirs” 1st Edition, McGraw Hill, 1999.

#### **REFERENCE BOOKS**

1. Ali Danesh, “PVT and Phase Behaviour of Petroleum Reservoir Fluids”, Elsevier, 1998

2. J. Hagoort, “Fundamentals of Gas Reservoir Engineering”, Elsevier, 1988

**Course Objectives:** To impart the students with the various elements and stages involved in Transportation of oil and gas, storage and marketing. To understand the key techno-economic parameters of petroleum storage and transportation and sense real time scenario of global oil and gas trading.

**COURSE OUTCOMES: (Employability)**

CO1: Choose an **effective transportation mode** for petroleum products

CO2: Incorporate a **suitable storage facilities** for a specific petroleum

CO3: Integrate **global oil pricing** and their control **mechanism**

CO4: Summarize **international crude oil market and price**

CO5: Estimate the **cost of long distance pipeline**

**UNIT: I Introduction**

9

Transportation of petroleum & petroleum products. **Transportation modes. Storage methods.** Basics of pipeline construction, operation and protection. **Pump and compressor stations. Instrumentation and control.**

**UNIT: II Petroleum Storage**

9

Metering and measurements of oil and gas. **Indian and Global supply scenario of petroleum** and petroleum products. Product quality control. **Storage of petroleum products in fixed installations. Standards and regulations.** Types of **storage tanks.** Underground storage of natural gas. **Bulk distribution and handling-** domestic, commercial and industrial.

**UNIT: III Oil Pricing & Control Mechanism**

9

Role of **International oil** companies and OPEC **pricing mechanism.** Administered and Market determined **pricing mechanism in India.** Conservation of petroleum & its products, **Spot and other market control mechanism.** **Indian and Global supply scenario** of petroleum and **petroleum products.**

**UNIT: IV Pricing**

9

**Oil and Gas Prices:** **International** Market and **Geo politics,** Crude oil characteristics, Marketing and trading of crude oil, Crude oil pricing, Mechanism and oil price elasticity. **Issues in domestic petroleum pricing.**

**UNIT: V Pricing Economy strategy**

9

**Inflation and effects on oil pricing.** **Factors controlling** oil and gas pricing. Oil differential and influence on price of oil. Economics of **long distance pipeline.** **Governments pricing policy** for petroleum products.

**Total hours: 45**

**TEXT BOOKS**

- 1 Oil & Natural Gas Transportation & Storage Infrastructure: Status, Trends, & Economic Benefits, report for American Petroleum Institute, IHS Global Inc, 2013.
- 2 Alex Marks, Petroleum Storage Principles, PennWell Books, 1983.

- 3 Harold Sill Bell, Petroleum Transportation Handbook, McGraw-Hill, 1963.
- 4 William Henry Day, Petroleum marketing practices and problems, Commercial Publishers, 1966

### **REFERENCE BOOKS**

- 1 Morris Albert Adelman, The World Petroleum Market, The Johns Hopkins university press 1973.
- 2 Petroleum Marketing and Transportation, Dallas (Tex.) International Oil and Gas Educational Center, Gulf Publishing Company, 1964

**Course Objectives:** To impart knowledge to the students on the basic concept of reservoir engineering, characteristics of crude oil and gas, rock properties, characteristics of reservoir fluids, flow through porous media and various measurements and measuring systems.

**COURSE OUTCOMES: (Employability)**

**CO 1:** Evaluating the characteristics and physicochemical properties of crude oil.

**CO 2:** Determining the rock and fluid properties of reservoir and coring analysis.

**CO 3:** Do calculations on basic PVT analysis of the specific reservoir of various sands.

**CO 4:** Deriving equations of flow of fluids through porous media.

**CO 5:** Estimating the reserves of various sands of the reservoir from well data and reservoir pressure measurements.

**UNIT I Introduction**

9

Introduction to reservoir engineering, characteristics of crude oil and natural gas, classification of crude and its physicochemical properties, calculation of hydrocarbon volumes, fluid pressure regimes, volumetric gas reservoir engineering.

**UNIT II Reservoir Rock Properties**

9

Porosity and permeability determination, combination of permeability in parallel & series beds, porosity permeability relationship, fluid saturation determination and significance, effective and relative permeability, wettability, capillary pressure characteristics, measurements and uses. Coring and Core Analysis

**UNIT III Reservoir Fluids**

9

Phase behavior of hydrocarbon system, ideal & non ideal system, equilibrium ratios, reservoir fluid sampling, PVT properties determination, different correlations and laboratory measurements, data reduction, evaluation and application.

**UNIT IV Flow of Fluids through Porous Media**

9

Darcy's law, single and multiphase flow, linear, radial & spherical flow, steady state & unsteady state flow, GOR, WOR equations, derivation of the basic radial flow equation, condition of solution.

**UNIT V Measuring system**

9

Reservoir Pressure Measurements and Significance- Techniques of pressure measurement.

Reservoir Drives: Reservoir drive mechanics and recovery factors. Reserve estimation: resource & reserve concept.

**Total hours: 45**

**TEXT BOOKS**

1. Tarek Ahmed, "Reservoir engineering hand book", 3rd edition, Gulf publishing house, 2006.
2. Guo, B, Lyons, W.C. and Ghalambor, A., Petroleum production engineering: a computer assisted approach, Gulf Professional Publishing, Burlington, 3<sup>rd</sup> edition, 2006.

## **REFERENCE BOOKS**

1. Tarek Ahmed, Paul D Mc Kinney, "Advanced reservoir engineering" Gulf publishing house, 2<sup>nd</sup> edition, 2005.
2. Abdus Satar, James L Butchwater, "Practical enhanced reservoir engineering" Penwell corporation, 2<sup>nd</sup> edition, 2007.

**Course Objectives:**

To introduce control equipments used to control the production process of a chemical Factory and to introduce the control mechanism through automation and computers. Gains knowledge in designing a control system and identifying the alternative control configuration for a given process plant or entire plant. He will be familiar with the control mechanism before attempting to tackle process control problems.

**COURSE OUTCOMES:(Employability)**

CO1: Explain the basic principles & importance of **process control** in industrial process plants;

CO2: Specify the required **instrumentation** and final elements to ensure that well-tuned control is achieved;

CO3: Explain the use of **block diagrams** & the mathematical basis for the design of control systems;

CO4: Design and tune process **(PID) controllers**;

CO5: Analyzing plant dynamics and the design of well tuned **control loops**;

**UNITI Introduction****9**

Laplace transformation, transform of standard functions, derivatives and integrals, inversion, theorems in **Laplace transformation**, application .Open-loop systems, first order systems and their transient response for standard input functions, first order systems in series, linearization and its application in process control, second order systems and their dynamics, transfer function for **chemical reactors and dynamics**.

**UNITII Closed loop system****9**

**Closed loop control systems**, development of block diagram for feed-back control systems, servo and regulator problems, Transfer function for controllers and final control element, principles of pneumatic and electronic controllers, transportation lag, transient response of closed-loop control systems and their stability.

**UNITIII Open loop system****9**

Introduction to frequency response of closed-loop systems, open loop control system, control system design by frequency, **Bode diagram**, stability criterion, **Nyquist-diagram**; Tuning of controller settings.

**UNITIV Advanced control system****9**

Controller mechanism, introduction to advanced control systems, cascade control, feed forward control, control of distillation towers and heat exchangers, introduction to **microprocessors** and computer control of chemical processes.

## **UNITV Measurements & Instruments**

**9**

Principles of measurements and classification of process control instruments, measurements of temperature, pressure, fluid flow, liquid weight and weight flow rate, viscosity and consistency, pH, concentration, electrical and thermal conductivity, humidity of gases, composition by physical and chemical properties and spectroscopy.

**Total hours: 45**

### **TEXTBOOKS**

1. CoughnowrandKoppel, "ProcessSystemsAnalysisandControl", McGraw-Hill, New York, 1986.
2. George Stephanopolous, "Chemical Process Control", Prentice-Hall of India Pvt. Ltd., New Delhi, 1990.

### **REFERENCE BOOKS**

1. Thomas, E. Marlin, Process Control, 2nd Edn, McGraw-Hills International Edn. 2000.
2. George Stephanopoulos, Chemical Process Control, Prentice Hall of India 2003.
3. Norman H. Ceaglske, Automatic process control for chemical engineers,

**Course Objectives:** To enable the students to understand the basic principles of thermodynamics, thermodynamic property of multi-component mixtures, minimum reflux ratio of MCD systems, properties and Methods of MCD column design.

**COURSE OUTCOMES: (Employability)**

CO1: Determine bubble point and dew point for multicomponent mixtures using K-values and relative volatility.

CO2: Determine minimum reflux ratio, minimum no. of stages, feed tray location, and distribution of key components using various shortcut methods.

CO3: Determine the number of stages in multi-stage multicomponent towers by various rigorous calculation methods.

CO4: Make calculations of multicomponent single stage operations like flash vaporization, differential distillation and steam distillation.

CO5: Carry out the design of azeotropic distillation and extractive distillation systems

**UNIT I Thermodynamic Principles**

9

Fundamental Thermodynamic principles involved in the calculation of vapour– liquid – Equilibria and enthalpies of multi-component mixtures– Use of multiple equation of state for the calculation of K values– Estimation of the fugacity coefficients for the vapour phase of polar gas mixtures– calculation of liquid– phase activity coefficients.

**UNIT II Thermodynamic Property Evaluation**

9

Fundamental principles involved in the separation of multi component mixtures– Determination of bubble- point and Dew Point Temperatures for multi-component mixtures– equilibrium flash distillation calculations for multi-component mixtures– separation of multi component mixtures at total reflux.

**UNIT III Minimum reflux ratio for MCD System**

9

General considerations in the design of columns– Column sequencing– Heuristics for column sequencing– Key components– Distributed components– Non-Distributed components – Adjacent keys. Definition of minimum reflux ratio – calculation of  $R_m$  for multi-component distillation– Underwood method– Colburn method.

**UNIT IV Various Methods of MCD Column Design**

9

Theta method of convergence – Kb method and the constant composition method– Application of the Theta method to complex columns and to system of columns– Lewis Matheson method– Stage and reflux requirements– Short cut methods and Simplified graphical procedures.

**UNIT V Various Types of MCD Columns**

9

Design of sieve, bubble cap, valve tray and structured packing columns for multi-component distillation– computation of plate efficiencies, principle type of reactors, screening, mixing.

**Total hours: 45**

**TEXT BOOKS**

1. Holland, C.D., "Fundamentals of MultiComponent Distillation", McGraw Hill Book Company, 1981
2. Van Winkle, "Distillation Operations", McGraw Hill Publications, 1987.

**REFERENCE BOOKS**

1. S.B.Thakore & B.I.Bhatt, "Introduction to process engineering and design", Tata McGraw-Hill, 2007.
2. P.B.Despande, "Distillation dynamics and control", Arnold USA 1985

**Course Objectives:** To Understand Well control operation during drilling for blow out prevention. To Understand Well control technology for horizontal, multilateral, ERD wells, and deep water drilling.

**UNIT I Basic terms, bottom hole pressure 9**

**BHP**, Normal , abnormal pressure, causes, U tube concept, shallow gas, top hole drilling with riser, gas cutting effect of gas expansion in riser, swab ,surge effect , scr ,choke line friction, ECD.

**UNIT II Kick indication and shut in procedure 9**

Causes of kicks, **kick signs, shut in procedure for land**, jack up, floating rig, type of influx, influx behavior, **close circulation**

**UNIT III Blow out preventer equipment surface / subsea 9**

Annular, ram preventer, packing element , accumulator system, sizing of accumulator surface and subsea unit , Kelly cock, safety valve , IBOP , check valve , bit float, **subsea BOP stack and control system** , choke manifold , kill manifold, diverters, function and pressure test, mud gas separator, vacuum degaser, rotating head, **rotating BOP.**

**UNIT IV Well killing method 9**

**Driller's method**, wait weight method, comparison, pressure behavior at different points during killing, volumetric method, subsea considerations, stripping and snubbing, **well control** considerations for horizontal wells , multilateral wells, **associated problems.**

**UNIT V Unusual situations in well control 9**

Plugged nozzles, pump failure, plugged and washed choke, string wash out , **lost circulation**, reversing out of influx through drill pipe , bull heading, hydrate formation, **problems and their remedial actions**

**Total hours: 45**

**COURSE OUTCOMES: (Employability)**

CO1: Understand the **physical principles and concepts** related to maintaining and regaining pressure control of wells while drilling.

CO2: Starting from **concepts of formation pressure, fracture pressure, and factors** which affect inflow, student will gain an understanding of the elements of primary and secondary well control methods.

CO3: Evaluate **Well designs to improve pressure containment** and reduce risk of secondary well control situations will be covered in detail.

CO4: Identify potential well control situations in advance of their occurrence. A brief overview of **well control equipment, their operation, and testing** will be covered to the extent necessary for the participants to identify requirements in the well planning phase.

CO5: Understand Classical well control methods will be covered and **several well control problems** will be worked using several standard well control worksheets.

**TEXT BOOKS:**

1. Robert D Grace, Advanced Blowout and Well Control, Gulf Publishing Company, 1994, 414 pp.
2. David Watson, Terry Brittenham, and Preston L. Moore, Advanced Well Control, Society of Petroleum Engineers, 2003, 386 pp.
3. Neel Adams, Well Control Problems and Solutions, Petroleum Publishing company, 1980, 683 pp.
4. IWCF manual, 2007
5. IADC, Well Control Manual, 2009.

# **OPEN ELECTIVE COURSES**

**Course Objectives:** This course presents the theory, application and algorithms relevant to solving linear programming problems. Also includes the simplex method for linear programming, duality and sensitivity analysis. To understand the basic theory behind LP, algorithms to solve LPs, and the basics of (mixed) integer programs (ILP).

### COURSE OUTCOMES (Skill Development):

CO1: Describe the basic concepts of convex analysis and explain the theoretical foundations of various issues related to **linear programming modelling**

CO2: Formulate real-world problems as a linear programming model and describe the theoretical workings of the **graphical and simplex method**, demonstrate the solution process by hand and solver

CO3: Explain the relationship between a linear program and its dual, including **strong duality and complementary slackness**

CO4: Perform sensitivity analysis to **identify the direction and magnitude** of change of a **linear programming model**'s optimal solution as the input data change

CO5: Formulate specialized linear programming problems, namely transportation problems

### Unit I: Testing of Hypothesis

9

Sampling distributions- Tests for single mean , proportion and difference of means (large and small samples)– Tests for single variance and equality of variances– **Chi-Square test** for goodness of fit– Independence of attributes– Non-parametric tests: Test for Randomness and Rank-sum test (**Wilcoxon test**).

### Unit II: Design of experiments

9

Randomization and Design - Randomization against Confounding- Randomization for Inference- Structure of Completely Randomized Designs- **Preliminary Exploratory Analysis**- Models and Parameters- Estimating Parameters.

### Unit III: Statistical Quality Control

9

Categories of **statistical quality control (SQC)**- Acceptance Sampling- Control charts for measurements (X charts and R charts)– **Control charts for attributes**(p charts, C charts and Np - charts)– Tolerance limits-Acceptance sampling.

### Unit IV; Linear programming

9

The Standard Maximum and Minimum Problems-Dual Linear Programming Problems-Formulation – Graphical solution – Simplex method – Big-M method-Transportation and Assignment models, fundamental theorem of linear programming,

## **Unit V: Advanced Linear Programming**

9

Introduction about large L.P. problems, Graphical solution- Geometric interpretation-Duality– Dual simplex method–Integer programming – Cutting-plane method.- the primal-dual algorithm, and Wolfe-Dantzig decomposition.

**Total hours: 45**

### **TEXT BOOKS**

1. Johnson, R.A. and Gupta, C.B., Miller and Friends “Probability and Statistics for Engineers”, Pearson Education, Asia, 7th edition, (2007).
2. TahaH.A. ,“Operations Research”, Pearson Education, Asia, 8th edition, (2007).

### **REFERENCE BOOKS**

1. Devore, J.L., “Probability and Statistics for Engineering and the Sciences” Thomson Brooks/Cole, International Student Edition, 7th edition, (2008).
2. Winston,W.L., “Operations Research–Applications and Algorithms”, Thomson, 1st Indian Reprint, 4th edition, (2007).

**Course Objectives:** To impart and create awareness among students on Engineering Ethics and Human Values. To understand social responsibility of an Engineer .To appreciate ethical dilemma while discharging duties in professional life.

**COURSE OUTCOMES (Employability):**

CO1: Understanding basic purpose of profession, professional ethics and various moral and social issues.

CO2: Awareness of professional rights and responsibilities of a Engineer, safety and risk benefit analysis of a Engineer

CO3: Acquiring knowledge of various roles of Engineer In applying ethical principles at various professional levels

CO4: Professional Ethical values and contemporary issues

CO5: Excelling in competitive and challenging environment to contribute to industrial growth.

**UNIT I Human Values**

9

Morals, Values and Ethics – Integrity – Work Ethic – Service Learning – Civic Virtue – Respect for Others – Living Peacefully – caring – Sharing – Honesty – Courage – Valuing Time – Co-operation – Commitment – Empathy – Self-Confidence – Character – Spirituality.

**UNIT II Engineering Ethics**

9

Senses of 'Engineering Ethics' - variety of moral issued - types of inquiry - moral dilemmas - moral autonomy - Kohlberg's theory - Gilligan's theory - consensus and controversy – Models of Professional Roles - theories about right action - Self-interest - customs and religion - uses of ethical theories.

**UNIT III Engineering as Social Experimentation**

9

Engineering as experimentation - engineers as responsible experimenters - codes of ethics - a balanced outlook on law - the challenger case study, similarities and contrast of engineering with standard experiments.

**UNIT IV Engineer's Responsibility for Safety**

9

Safety and risk - assessment of safety and risk - risk benefit analysis and reducing risk - the three mile island and Chernobyl case studies. Collegiality and loyalty - respect for authority - collective bargaining - confidentiality - conflicts of interest - occupational crime - professional rights - employee rights - Intellectual Property Rights (IPR) - discrimination.

**UNIT V Global Issues**

9

Multinational corporations - Environmental ethics - computer ethics - weapons development - engineers as managers-consulting engineers-engineers as expert witnesses and advisors - moral leadership-sample code of Ethics (Specific to a particular Engineering Discipline).

**Total hours: 45**

### **TEXT BOOKS**

1. Mike Martin and Roland Schinzinger, “Ethics in engineering”, McGraw-Hill, New York 1996.
2. Govindarajan M, Natarajan S, Senthil Kumar V. S, “ Engineering Ethics”, Prentice Hall of India, New Delhi, 2004.
3. John R Boatright, “Ethics and the Conduct of Business”, Pearson Education, New Delhi, 2003.

### **REFERENCE BOOKS**

1. Charles D. Fleddermann, “Engineering Ethics”, Pearson Education / Prentice Hall, New Jersey, 2004 (Indian Reprint now available)
2. Charles E Harris, Michael S. Protchard and Michael J Rabins, “Engineering Ethics – Concepts and Cases”, Wadsworth Thompson Leatning, United States, 2000 (Indian Reprint now available)
3. 4. Edmund G Seebauer and Robert L Barry, “Fundamentals of Ethics for Scientists and Engineers”, Oxford University Press, Oxford, 2001.

**Course Objectives:** This Course provides an introduction to energy systems and renewable energy resources, with a scientific examination of the energy field and an emphasis on alternate energy sources and their technology and application. The class will explore society's present needs and future energy demands, examine conventional energy sources and systems, including fossil fuels and nuclear energy, and then focus on alternate, renewable energy sources such as solar, biomass (conversions), wind power, geothermal, and hydro.

**COURSE OUTCOMES: (Employability)**

CO1: Have a basic knowledge of the principles of Fuel Cells and its components, types of Fuel Cells, performance characteristics, and applications of Fuel Cells.

CO2: Have a basic knowledge of Hydrogen Energy, Properties of Hydrogen, Production methods and purification, Storage methods, Environmental benefits and its Applications in the Hydrogen Economy.

CO3: Have a basic knowledge of Ocean energy resources and technologies including Tidal energy, Wave power devices, OTEC, Bio Photolysis, Ocean currents and Salinity gradient devices.

CO4: Have a basic knowledge of the principles of Magneto Hydro Dynamic power generation system, and its applications & technologies.

CO5: Understand thermodynamic process taking place in energy conservation and waste heat recovery.

**Unit I Energy**

9

Units of energy, conversion factors, general classification of energy, world energy resources and energy consumption, Indian energy resources and energy consumption, energy crisis, energy alternatives, Renewable and non-renewable energy sources and their availability. Prospects of Renewable energy sources

**Unit II Conventional Energy**

9

Conventional energy resources, Thermal, tydel and nuclear reactors, thermal, hydel and nuclear power plants, efficiency, merits and demerits of the above power plants, combustion processes, fluidized bed combustion.

**Unit III Non-Conventional Energy**

9

Solar energy, solar thermal systems, flat plate collectors, focusing collectors, solar water heating, solar cooling, solar distillation, solar refrigeration, solar dryers, solar pond, solar thermal power generation, solar energy application in India, energy plantations. Wind energy, types of wind-mills, types of wind rotors, Darrieus rotor and Gravian rotor, wind electric power generation, wind power in India, economics of wind farm, ocean wave energy conversion, ocean thermal energy conversion, tidal energy conversion, geothermal energy.

**Unit IV Biomass Energy**

9

Biomass energy resources, thermo-chemical and biochemical methods of biomass conversion, combustion, gasification, pyrolysis, biogas production, ethanol, fuel cells, alkaline fuel cell, phosphoric acid fuel-cell, molten carbonate fuel cell, solid oxide fuel cell, solid polymer electrolyte fuel-cell, magneto hydrodynamic power generation, energy storage routes like thermal energy storage, chemical, mechanical storage and electrical storage.

## Unit V Energy Conservation

9

Energy conservation in chemical process plants, energy audit, energy saving in heat exchangers, distillation columns, dryers, ovens and furnaces and boilers, steam economy in chemical plants, energy conservation.

**Total hours:**

45

### TEXT BOOKS

1. Rao, S. and Parulekar, B.B., "Energy Technology", Khanna Publishers, 2005.
2. Rai, G.D., "Non-conventional Energy Sources", Khanna Publishers, New Delhi, 1984.
3. Bansal, N.K., Kleeman, M. and Meliss, M., "Renewable Energy Sources and Conversion Technology", Tata McGraw Hill, 1990.
4. Nagpal, G.R., "Power Plant Engineering", Khanna Publishers, 2008.

### REFERENCE BOOKS

1. Nejat Vezirog, "Alternate Energy Sources", IT, McGraw Hill, New York.
2. El. Wakil, "Power Plant Technology", Tata McGraw Hill, New York, 2002.
3. Sukhatme. S.P., "Solar Energy-Thermal Collection and Storage", Tata McGraw hill, New Delhi, 1981.

**Course Objectives:** To impart knowledge on the design of different staged operations using the concept of equilibrium. The students will learn in detail the unifying theory and design of different staged operations like absorption, distillation, extraction and adsorption.

### COURSE OUTCOMES (Employability):

CO1: Describe basic principles of various equilibrium staged operations involving material and energy balances

CO2: Determine the number of equilibrium stages required for distillation and absorption units

CO3: Determine number of transfer units and height requirements required for extraction, leaching and adsorption units

CO4: Explain different column/equipment used for various separation applications

CO5: Recognize modern separation techniques applied in industries for high purity products

#### Unit I -Absorption

9

Gas Absorption and Stripping– Equilibrium; material balance; limiting gas-liquid ratio; tray tower absorber - calculation of number of theoretical stages, tray efficiency ,tower diameter; packed tower absorber –rate based approach; determination of height of packing using HTU and NTU calculations.

#### Unit II-Distillation

9

Vapour liquid equilibria – Raoult’s law, vapour– liquid equilibrium diagrams for ideal and non- ideal systems,enthalpy concentration diagrams. Principle Of Distillation – flash distillation, differential distillation, steam distillation, multistage continuous rectification, Number of ideal stages by Mc.Cabe- Thiele method and Ponchan, Savarit method,

Total reflux, minimum reflux ratio,optimum reflux ratio. Desing of azeotropic and extractive distillation columns.

#### Unit III- Multi-component Distillation

9

Fundamental principles involved in the separation of multi-component mixtures – equilibrium flash distillation calculations for multi-component mixtures–separation of multi-component mixtures at total reflux. Calculation of minimum reflux ratio. Determination of number of trays

#### Unit IV- Liquid Extraction

9

Liquid - liquid extraction- solvent characteristics– equilibrium stage wise contact calculations for batch and continuous extractors – differential contact equipment- Spray, packed mechanically agitated contactors and their design calculations-packed bed extraction with reflux. Pulsed extractors, centrifugal extractors- Supercritical

extraction

### **Unit V-Adsorption & Membrane separation Process**

9

Adsorption- Types of adsorption, nature of adsorbents, adsorption equilibria, effect of pressure and temperature on adsorption isotherms, **Adsorption operations** – stage wise operations, steady state moving bed and unsteady state fixed bed adsorbers, breakthrough curves. Solid and liquid membranes; concept of **osmosis**; reverse osmosis; **electro-dialysis**; ultra filtration.

**Total hours: 45**

#### **TEXT BOOKS**

1. Wankat, P, "Equilibrium Stage Separations", Prentice Hall.
2. Treybal, R.E. , "Mass Transfer Operations ", 3rdEdn., McGraw-Hill.
3. Seader, J.D. and E.J. Henley, "Separation Process Principles", 2nd Ed., John Wiley,2006.

#### **REFERENCE BOOKS**

1. W.L .McCabe, J.C. Smith, and Harriot. P, "Unit Operations of Chemical Engineering", sixth edition McGraw-Hill. International Edition, 2001.
2. C.Judson King "Separation Processes", Tata McGraw-Hill1974.
3. R.F.Strigle(jr), "Packed Tower Design and Application", 2nd edition, Gulf Publishing company.

**Course Objectives:** To understand the various decision phases in a supply chain, to be aware of the Supply Chain and its drivers, to design Supply Chain Network, to build a aggregate plan in supply chain, to understand Sourcing Decisions in Supply Chain to comprehend the influence of Information technology in Supply Chain

**COURSE OUTCOMES:** (Entrepreneurship)

CO1: Critically evaluate the principles of supply chain management

CO2: Design, organize and effectively manage a supply network, taking account in particular of supply strategy, inter-organizational relationships and logistics issues

CO3: Apply forecasting and purchasing/Inventory concepts to improve supply chain operations

CO4: Use logistics technology tools and resources, in order to comply with the requirements of logistics/supply chain management.

CO5: Utilize information and internet technology systems proficiently to support logistics management decisions.

#### **UNIT I Introduction to Supply Chain**

9

Understanding Supply Chain- The Development Chain - Decision phases - Supply chain performance - Competitive and supply chain strategies - Key issues in Supply Chain Management  
Achieving strategic fit – Expanding Strategic scope

#### **UNIT II Supply Chain Drivers and Design**

9

Drivers of supply chain performance – Designing distribution network – Network Design in the Supply Chain - Network design in Uncertain Environment-Implementing a competitive approach to Warehousing and Distribution

#### **UNIT III Aggregate Planning and Managing Supply, Demand and Inventory**

9

Aggregate Planning in a Supply chain: role - Managing Supply – Managing Demand in Supply Chain – Cycle and Safety inventory in supply chain – Methodology of Supply Chain Management project-solutions-Level of product availability.

#### **UNIT IV Sourcing and Transportation**

9

Sourcing decision in supply chain - Third and Fourth – Party Logistics providers - Supplier scoring and assessment - Transportation in a Supply Chain – Risk and Trade-offs in transportation design.

#### **UNIT V Information Technology in a Supply Chain**

9

Information technology in a supply chain – Impact and benefits of IT in supply chain management- CRM, ISCM, SRM in supply chain - Over view of recent trends in Supply Chain: e-SRM, e-LRM, e-SCM.

**Total hours: 45**

### **TEXT BOOKS**

1. Sunil Chopra and Peter Meindl, “Supply Chain Management-Strategy Planning Indian Reprint, 2010.
2. Jananth Shah “Supply Chain Management – Text and Cases“, Pearson and Operation”, Pearson Education, 4<sup>th</sup> Edition, 2008.

### **REFERENCE BOOKS**

1. Altekar Rahul V, “Supply Chain Management-Concept and Cases”, Prentice Hall India, 2005.
2. Monczka et al., “Purchasing and Supply Chain Management”, Thomson Learning, 2nd Edition, 2 Reprint, 2002.

**Course Objectives:** To understand the various principles, practices of TQM to achieve quality. To get acquainted with the various statistical tools and approaches for quality control and continuous improvement. To get aware of the importance of ISO and Quality Systems.

### **COURSE OUTCOMES (Employability):**

CO1: Student will able to explain the **quality management** philosophies and frameworks

CO2: Students will know the various tools and techniques of quality management

CO3: Students will able to apply quality tools and techniques in both **manufacturing and service industry**

CO4: Analyze benchmarking process used in total productive maintenance and in various stages of **FMEA**

CO5: Student will able to explain the quality systems and **energy auditing process**.

### **UNIT I INTRODUCTION**

8

Definition of Quality, Dimensions of Quality, Quality Planning, Quality costs - **Analysis Techniques** for Quality Costs, Basic concepts of Total Quality Management, Historical Review, **Principles of TQM, Leadership – Concepts**, Role of Senior Management, Quality Council, Quality Statements, Strategic Planning, Deming Philosophy, Barriers to **TQM Implementation**.

### **UNIT II TQM PRINCIPLES**

7

Customer satisfaction – **Customer Perception of Quality**, Customer Complaints, Service Quality, Customer Retention, Employee Involvement – Motivation, Empowerment, Teams, Recognition and Reward, Performance Appraisal, Benefits.

### **UNIT III TQM IMPROVEMENT PROCESS**

8

Continuous Process Improvement – **Juran Trilogy, PDSA** Cycle, **5S, Kaizen**, Supplier Partnership – Partnering, sourcing, Supplier Selection, Supplier Rating, Relationship Development, Performance Measures – Basic Concepts, **Strategy**, Performance Measure.

### **UNIT IV STATISTICAL PROCESS CONTROL (SPC)**

8

The seven tools of quality, Statistical Fundamentals – Measures of central Tendency and Dispersion, Population and Sample, Normal Curve, Control Charts for variables and attributes, Process capability, **Concept of six sigma**, New seven Management tools.

### **UNIT V TQM TOOLS**

7

**Benchmarking** – Reasons to Benchmark, Benchmarking Process, Quality Function Deployment (QFD) – House of Quality, **QFD Process**, Benefits, Taguchi Quality Loss Function, Total Productive Maintenance (TPM) – Concept, Improvement Needs, **FMEA – Stages of FMEA**.

### **UNIT VI QUALITY SYSTEMS**

7

Need for ISO 9000 and Other Quality Systems, ISO 9000:2000 Quality System– Elements, Implementation of Quality System, Documentation, Quality Auditing, TS 16949, ISO 14000 – Concept, Requirements and Benefits.

**Total hour: 45**

### **TEXT BOOKS**

2. Oakland.J.S., “Total Quality Management”, Butterworth Heinemann Ltd., Oxford,1989.
3. Zeiri, “Total Quality Management for Engineers”, Wood Head Publishers, 1998.

This course provides the knowledge about energy audit and energy conservation methods in I.C. Engines.

**COURSE OUTCOMES:(Employability):**

**CO1:** Understanding the basics of demand side management and mechanisms (technical, legal or financial) that influences energy consumption. Recognizing opportunities for increasing rational use of energy.

**CO2:** Understanding the basics of energy auditing with application on different sectors.

**CO3:** Understood and acquired fundamental knowledge on the science of energy and on both the conventional and non-conventional energy technologies

**CO4:** Acquired the skills needed for the energy monitoring, auditing and management.

**CO5:** Capable of design and analysis of energy conversion systems.

**UNIT I ENERGY AND ENVIRONMENT 9**

Introduction - fossil fuels reserves - world energy consumption - green house effect, global warming - Renewable energy sources - environmental aspects utilization - energy prizes - energy policies.

**UNIT II ENERGY CONSERVATION 9**

Energy conservation schemes - industrial energy use - energy surveying and auditing - energy index -Energy cost - cost index - energy conservation in engineering and process industry, in thermal Systems, in buildings and non-conventional energy resources scheme

**UNIT III ENERGY TECHNOLOGIES 9**

Fuels and consumption - boilers - furnaces - waste heat recovery systems - heat pumps and Refrigerators - storage systems - insulated pipe work systems - heat exchangers.

**UNIT IV ENERGY MANAGEMENT 9**

Energy management principles - energy resource management - energy management information Systems - instrumentation and measurement - computerized energy management - energy Auditing.

**UNIT V ECONOMICS AND FINANCE 9**

Costing techniques - cost optimization - optimal target investment schedule - financial appraisal and Profitability - project management.

**TOTAL: 45 Hours**

**TEXT BOOKS:**

1. Murphy W.R. and McKAY G., "Energy Management, Butterworths, London, 1982.
2. Trivedi P.R., Julka B.R., "Energy Management", Common wealth publishers, 1997.

4. Ray D.A. "Industrial Energy Conservsation

# **Humanities and Social Sciences Elective Courses**

**COURSE OBJECTIVE:**

- To improve the interpersonal skills, soft skills, effective team player and analyze strength and weakness to meet their professional career.

**COURSE OUTCOMES (Skill Development):**

CO1: Develop the soft skills through personality features and get rid of barriers.

CO2: Build the basic characters such as cleanliness, hygiene and appearance.

CO3: Creating the soft skills in disciplinary actions.

CO4: Understand the concept of self-awareness and self esteem

CO5: Adapt Familiar with the self-motivation

**UNIT I SOFT SKILLS I****6**

Introduction to Personality Development – Meaning-Features of personality=Dimensions of Personality=Determinants of Personality-Features and Traits- Components of self concept- Barriers-Self analysis

**UNIT II SOFT SKILLS II****6**

Importance of Soft Skills – First impression-Work Place requirements-Discipline-Cleanliness-Hygiene-general Appearance--Building Confidence—Concept of Thinking and Usage-Value of Time-Focus & Commitment.

**UNIT III SOFT SKILLS IN ACTION****6**

Grooming – Attire – Understanding others- – Stability & Maturity Development – Strengths – Weakness – Opportunities-threats -Merits of SWOT Analysis-Components-how to convert weakness into strengths-Goal settings

**UNIT IV SELF AWARENESS AND SELF ESTEEM****6**

Definitions-Components of self awareness-Developing Self awareness-Self esteem-meaning-Steps to improve self esteem

**UNIT V SELF MOTIVATION****6**

Motivation –Meaning-Techniques of self motivation-Motivation & goal setting – Motivation and emotion – Motivation at work.

**Total: 30 Hours****REFERENCES:**

- Psychology of Self esteem – Nathaniel Branden, Nash (1st edition), Jossey-Bass (32nd anniversary edition)

**COURSE OBJECTIVE**

- To improve the leadership quality, team management, quantitative analyzing knowledge, ordering, sequencing and logical thinking knowledge to meet their professional career.

**COURSE OUTCOMES(Skill Development):**

- CO1: Develop the soft skills and basic etiquette  
 CO2: Develop the quantitative aptitude skills  
 CO3: Build the advanced aptitude skills  
 CO4: Adapt Familiar with the analytical problem-solving skills  
 CO5: Build the knowledge on logical problem-solving skills

**UNIT I SOFT SKILLS III****6**

Basic Etiquette – Email etiquette – Business etiquette – Telephone etiquette – Meeting etiquette – Adjustment of Role & Leadership – Team Management & Development

**UNIT II QUANTITATIVE APTITUDE I****6**

Percentage – Profit Loss -Discount – Ratio Proportion – Time & Work – Time, Speed & Distancel. Problems relating to ages- Permutation & Combination-Probability

**UNIT III QUANTITATIVE APTITUDE II****6**

Mensuration Clocks and Calendars- Boats-Simple Interest –Compound Interest- Fractions and Decimals – Square roots – Functions.

**UNIT IV ANALYTICAL PROBLEMS****6**

Introduction – Linear Sequencing – Seating Arrangements – Distribution/Double Line Up – Selection – Ordering and Sequencing – Binary Logic – Venn Diagrams –Directions.

**UNIT V LOGICAL PROBLEMS****6**

Introduction to Logical problems – Cause and Effect – Course of Action – Statement and Assumption – Letter and Symbol series – Analogies.

**TOTAL: 30 Hours****REFERENCES:**

- Personality Enrichment--K R Dhanalakshmi And N S Raghunathan, Margham Publications
- Personality Development --Dr V M Selvaraj Bhavani Publications
- Quantitative Aptitude – R. S Aggarwal
- Logical and Analytical Reasoning (English) 30th Edition – A.K Gupta

**COURSE OBJECTIVE:**

- To improve the verbal aptitude, Speech Mechanism, Sentence Stress knowledge, Personality factors, time management and team building to meet their professional career.

**COURSE OUTCOMES(Skill Development):**

- CO1: Develop the **personality skills**  
 CO2: Build the confidence level  
 CO3: Evaluate the student's skills through **SWOT analysis**  
 CO4: Develop the **self-awareness and self esteem**  
 CO5: Improve the **motivation skills**

**UNIT I VERBAL APPTITUDE I****6**

Phonetics/Neutral Accent/Pronunciation – Speech Mechanism/Mouth & Face Exercise – Vowels & Consonants  
 – Sounds – Syllable and Syllable Stress/ Word Stress – Sentence Stress & **Intonation – Articulation Exercise** – Rate of Speech / Flow of Speech / **Idiomatic Phrases.**

**UNIT II VERBAL APTITUDE II****6**

**Singular/plural**-present tense/past tense—genders - **Prepositions-conjunctions**-Choice of words—simple sentences—compound sentences- summarising phrases—Synonyms—Antonyms—Analogies—Similar Words

**UNIT III SOFT SKILLS IV****6**

**Attitude—Meaning-** Features of attitude-Formation-Personality Factors-Types of attitude-change in attitude- **Developing Positive attitude.**

**UNIT IV TIME MANAGEMENT****6**

Definition –Meaning-Importance, Value of time as an important resource- comparison of **Time and Money-** Circle of influence and circle of control—Definition of URGENT and IMPORTANT—Time Wasters and how to reduce—**Procrastination—meaning and impact- 4 Quadrants.**

**UNIT V TEAM BUILDING****6**

Meaning—Aspects of team building—Process of team building—Types of Teams-**Team ethics and Understanding-**Team trust and commitment

**TOTAL: 30 Hours****REFERENCES:**

1. Managing Soft Skills And Personality - B N Ghosh, Mcgraw Hill Publications.
2. Principles and Practices of Management - Shejwalkar and Ghanekar McGraw Hill Latest.
3. Time management for Busy people – Roberta roesch, Tata Mcgraw-Hill Edition.
4. Personality Development -Dr V M Selvaraj, Bhavani Publications.

**COURSE OBJECTIVE**

- To improve the communication by understanding the elements of communication, presentation skills, understanding the audience, Personality factors, improve the skill in seminars and conferences presentation.

**COURSE OUTCOMES:(Skill Development):**

CO1: Define importance of assertiveness characteristic causes of misunderstanding

CO2: Explain the elements of communication function and principles formal and informal communication

CO3: Classify the importance of presentation and concept of 5w's and One H

CO4: Explain the rules for slide presentation precaution of seminar and conferences

CO5: Define necessity, principles of change management and leader approach

**UNIT I SOFT SKILLS V****6**

Assertiveness—Meaning—Importance of assertiveness- Characteristics of assertive communication-Merits – forms of assertion—Causes of misunderstanding

**UNIT II COMMUNICATION SKILLS****6**

Meaning—Elements of communication—Functions of communication—Principles of communication—Formal and Informal communication—Barriers in Communication—Characteristics of good communication—Feedback—communication systems.

**UNIT III PRESENTATION SKILLS I****6**

Meaning—Importance of Presentation—Concept of 5 w's and one H—understanding the audience—Types of presentations—How to make effective presentation

**UNIT IV PRESENTATION SKILLS II****6**

Use of slide, PPT's. and visuals—Rules for slide presentation—precautions-seminars and conferences-Steps to eliminate Stage fear.

**UNIT V CHANGE MANAGEMENT****6**

Definition – Necessity - Resistance towards Change – 10 Principles of Change Management – Leaders approach - Effective Change management.

**TOTAL: 30 Hours****REFERENCES**

- Helping employees embrace change - LaClair, J. and Rao, R. Helping Employees Embrace Change, McKinsey Quarterly, 2002, Number 4.
- Who Moved My Cheese by Spencer Johnson published by Vermilion first edition
- Effective Communication. Adair, John. London: Pan Macmillan Ltd., 2003.
- Business Communication Today: Bovee, Courtland L, John V. Thill & Barbara E. Schatzman.Tenth Edition. New Jersey: Prentice Hall, 2010.

**COURSE OUTCOMES (Skill Development):**

CO1: Understand themselves in relation to their community and develop among themselves since of **social and civic and responsibility**.

CO2: Identify the **needs and problem of the community** an involve them in problem solving.

CO3: Utilize their knowledge in finding practical solution to **individual and community problem**.

CO4: Develop the confidence require for group living and sharing of responsibilities of acquire **leadership qualities and democratic attitudes**.

CO5: Develop the capacity to meet emergencies and natural disasters and practice **national integration and social harmony**

**UNIT I INTRODUCTION AND BASIC CONCEPTS OF NSS 6**

NSS: History, philosophy, aims, objectives –Emblem: flag, motto, song, badge- NSS functionaries: **Organizational structure**, roles and responsibilities.

**UNIT II NSS PROGRAMS AND ACTIVITIES 6**

Concept of regular activities- special camping-day camps-Basis of adoption of village/slums, **Methodology of conducting survey**-Financial pattern of the scheme- other youth program/schemes of GOI- Coordination with different agencies- Maintenance of the dairy

**UNIT III UNDERSTANDING YOUTH 6**

Youth: Definition, profile of youth, categories – **youth: Issues, challenges and opportunities** - Youth as an agent of social change.

**UNIT IV COMMUNITY MOBILIZATION 6**

Mapping of community stakeholders-Designing the message in the context of the problem and the culture of the community-Identifying methods of mobilization-**Youth adult partnership**

**UNIT V VOLUNTEERISM AND SHRAMDAN 6**

Indian Tradition of volunteerism-Needs& Importance of volunteerism- Motivation and constraints of volunteerism-**Shramdan as a part of volunteerism**.

**TOTAL: 30 Hours**
